

Assignment - 1

Module - 1

Q1. What is SDLC?

Ans. SDLC stands for Software Development Lifecycle, it is a step by step process of developing a software.

Q2. What is Software Testing?

Ans. Software Testing is a process used to identify correctness, completeness and quality of a developed software.

Q3. What is Agile Methodology?

Ans. Agile methodology is a combination of a iterative and incremental model which is mainly used for process adaptability and customer satisfaction with the rapid delivery of the product.

Q4. What is SRS?

Ans. SRS stands for Software Requirement Specification which is a complete description of the behaviour of the system.

Q5. What is OOPs?

Ans. OOPs stands for Object Oriented Programming Systems. It is a real time entity.

Q6. Write Basic concepts of OOPs?

Ans. The Basic Concepts of OOPs are:

- A) Class
- B) Object
- C) Encapsulation
- D) Polymorphism
- E) Inheritance
- F) Abstraction

Q7. What is Object?

Ans. Object is a instance of a class.

Q8. What is Class?

Ans. Class is a collection of data member (variable) and data function (process and methods).

Q9. What is Encapsulation?

Ans. Encapsulation is used for hiding data in a small level, data wrapping in a single unit.

Q10. What is Inheritance?

Ans. One class inherits the characteristics or behaviour of the another class is called Inheritance.

Q11. What is Polymorphism?

Ans. Polymorphism means having any forms.

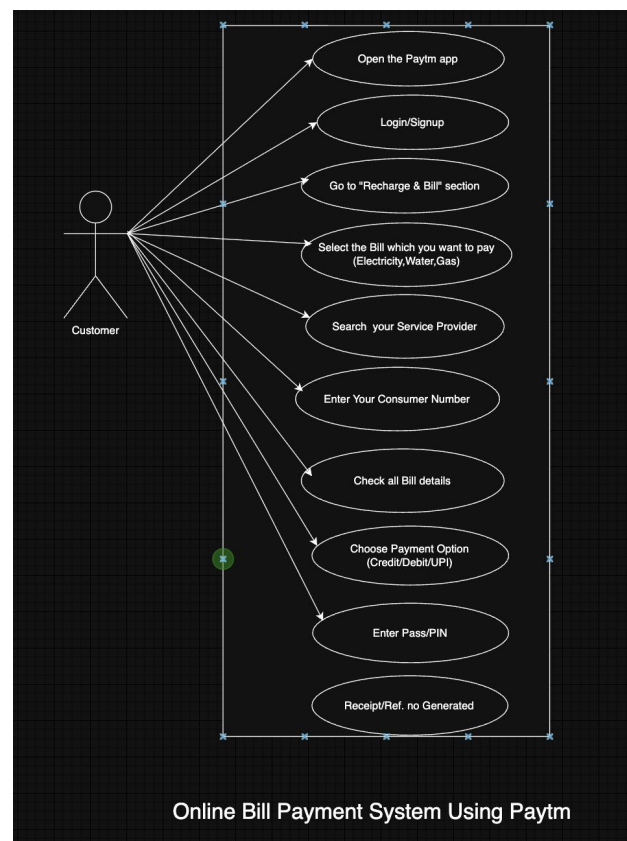

There are two type of methods in Polymorphism:

A) Overloading

B) Overriding

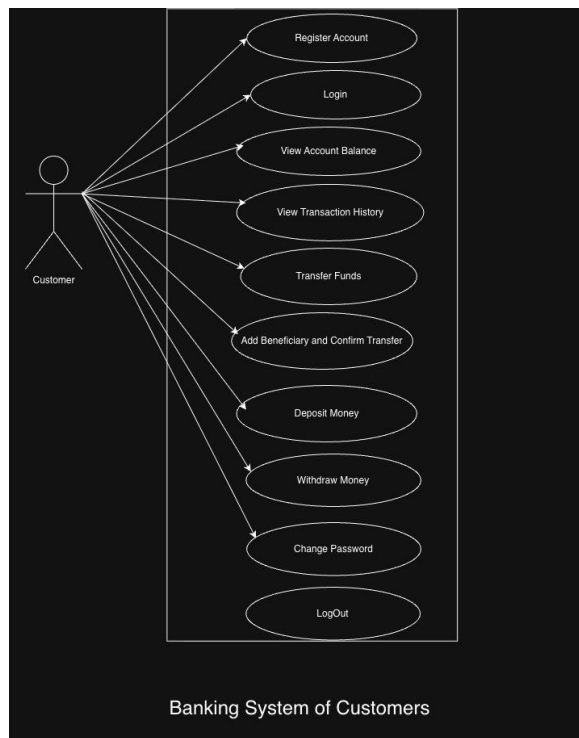

Q12. Draw usecase on online bill payment system (Paytm).

Ans.

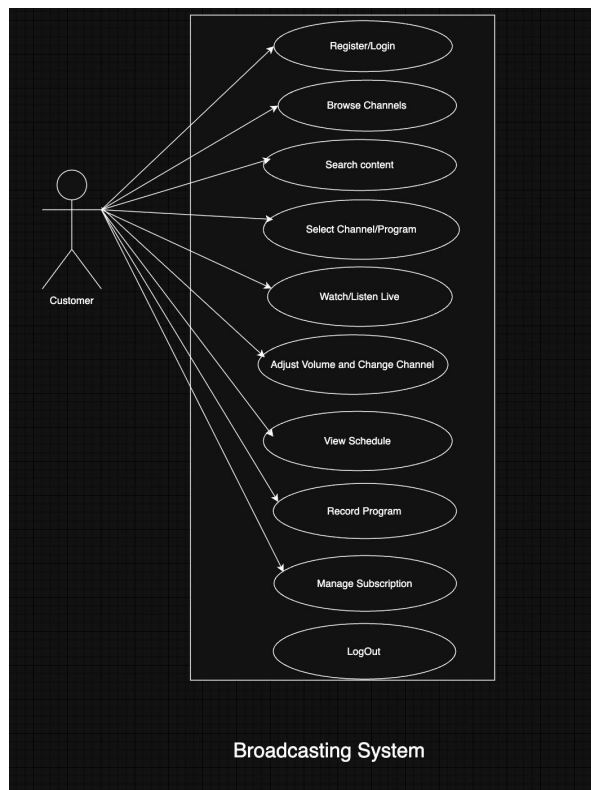

Q13. Draw Usecase on Banking system for customers.

Ans.

Q14. Draw Usecase on broadcasting system.

Ans.

Q15. Write SDLC Phases with basic introduction.

Ans. SDLC Phases are:

A) **Requirement Gathering:** Collecting all the functional and non functional requirement of the proposed system.

B) **Analysis:** The analysis phase is used to define how these requirement will be accomplished.

C) **Designing:** We can say this phase is used to make a blueprint of a product that how to develop the software product.

D) **Implementation:** This phase is the main developing or coding phase in which main development of the software product will be done.

E) **Testing:** This phase is used to check the software that it meets all the customer requirement and delivering good quality product.

F) **Maintainance:** It is the process of enhancing the system or fixing the defects.

Q16. Explain phases of the waterfall model.

Ans. It is a classical software lifecycle which follows step by step process of developing a software in a single direction.

- It is used while project is short.
- Requirements are well documented and fixed.

PROS:

- ✓ Simple and Easy to Understand.
- ✓ Process and results are well documented.
- ✓ Easy to manage.

CONS:

- ✧ Not suitable for long and complex project.
- ✧ Not suitable for high risk projects.

Q17. Write phases of Spiral Model.

Ans. The phases of spiral model are:

1. **Planning:** Requirement Gathering/Analysis
2. **Risk Analysis:** Identifying Risk
3. **Engineering:** Development and Testing.
4. **Customer Evaluation:** Customer Feedback and Future Planning.

Q18. Write Agile Manifesto Principle.

Ans. Agile Manifesto Principles are:

- A) Individual Interaction.
- B) Working Software
- C) Customer Collaboration
- D) Responding to Change

Q19. Explain working methodology of agile model and also write pros and cons.

Ans. Agile methodology is a combination of both incremental and iterative model which is mainly used for process adaptability and customer satisfaction with the rapid delivery of the product. Now it is mostly working everywhere. It works as a sprint and all the task are assigning to the each project member and each should complete there task in a given sprint.

PROS:

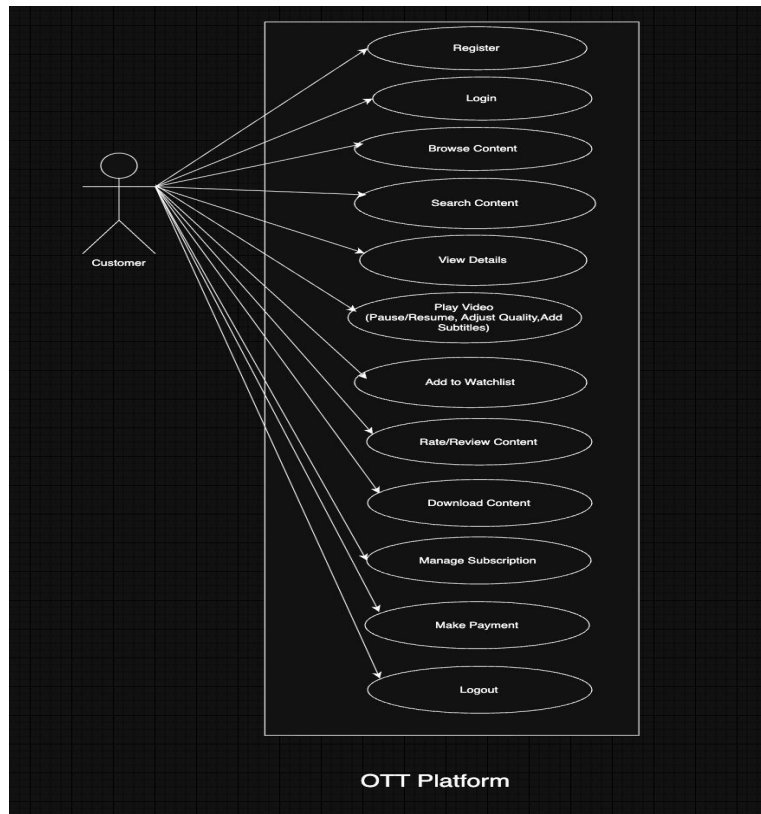

- ✓ Used for large and complex projects.
- ✓ Easy to manage.
- ✓ Promotes teamwork and cross training.
- ✓ Deliver final product fast.

CONS:

- ✧ More risk of sustainability and maintainability.
- ✧ Not for short projects.

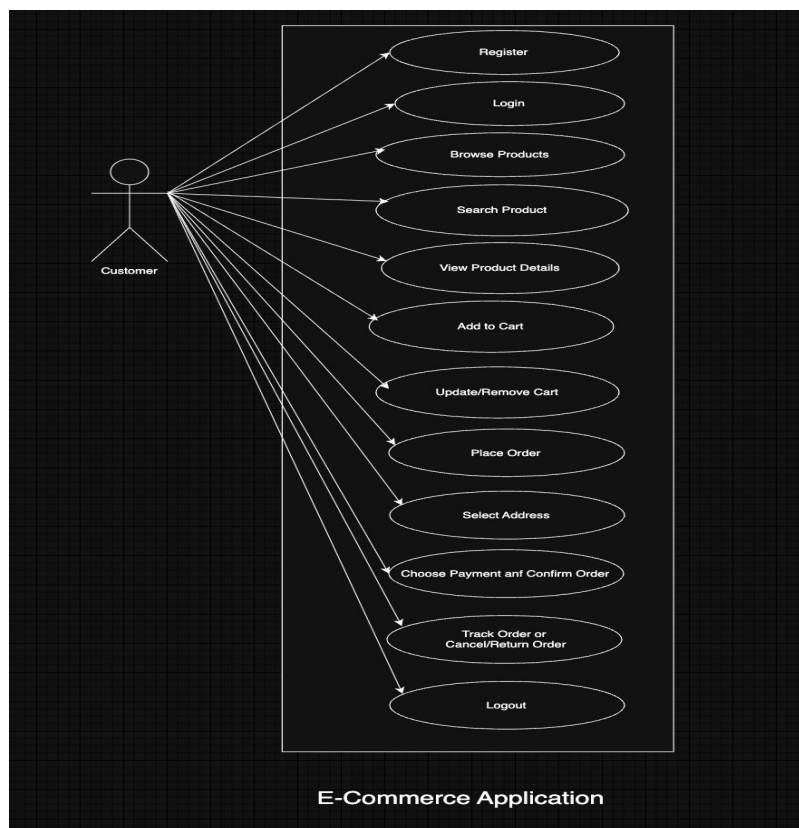

Q20. Draw usecase on OTT Platform.

Ans.

Q21. Draw Usecase on E-Commerce Application.

Ans.

Q22. Draw Usecase on Online shopping product using payment gateway.

Ans.
