

Assignment-2 Session12

Question 1: Write Equivalence Partitioning (EP) test cases for the phone number input field in a Zomato-style food order form, where the field must accept exactly 10 digits and no letters or special characters.

Answer

Requirement

- ✧ Phone number must contain **exactly 10 digits**.
- ✧ Only numeric values are allowed.
- ✧ Letters and special characters are not allowed.

Equivalence Partitions

Partition	Input Type	Valid/Invalid
EP1	Exactly 10 numeric digits	Valid
EP2	Less than 10 digits	Invalid
EP3	More than 10 digits	Invalid
EP4	Alphabetic characters	Invalid
EP5	Special characters	Invalid
EP6	Blank input	Invalid

Test Cases

TC ID	Input	Expected Result
TC-001	9876543210	Accepted
TC-002	987654321	Validation error
TC-003	98765432101	Validation error
TC-004	ABCDE12345	Validation error
TC-005	98765@3210	Validation error
TC-006	Blank	"Phone Number is Required"

Question 2: For a Flipkart-style Sign-up form with a password field (8–16 characters), write Boundary Value Analysis (BVA) test cases.

Answer

Requirement

Password length must be **8 to 16 characters**.

TC ID	Password Length	Boundary Type	Expected Result
-------	-----------------	---------------	-----------------

TC ID	Password Length	Boundary Type	Expected Result
TC-001	7 Characters	Below Minimum	Rejected
TC-002	8 Characters	Minimum	Accepted
TC-003	9 Characters	Just Above Minimum	Accepted
TC-004	15 Characters	Just Below Maximum	Accepted
TC-005	16 Characters	Maximum	Accepted
TC-006	17 Characters	Above Maximum	Rejected

Question 3: Given an Instagram-like post creation form with a caption input that allows up to 2200 characters, use Equivalence Partitioning to identify valid and invalid input ranges and write at least 3 test cases for each partition.

Answer

Equivalence Partitions

Partition	Range	Valid/Invalid
EP1	0–2200 Characters	Valid
EP2	More than 2200 Characters	Invalid

Valid Test Cases

TC ID	Caption Length	Expected Result
TC-001	0 Characters (Blank Caption)	Accepted
TC-002	100 Characters	Accepted
TC-003	2200 Characters	Accepted

Invalid Test Cases

TC ID	Caption Length	Expected Result
TC-004	2201 Characters	Validation Error
TC-005	2300 Characters	Validation Error
TC-006	3000 Characters	Validation Error

Question 4: For a BookMyShow movie ticket booking form with a "Number of Tickets" field (Allowed: 1 to 10), write Boundary Value Analysis (BVA) test cases.

Answer

Requirement

Number of tickets must be **between 1 and 10**.

TC ID	Number of Tickets	Boundary Type	Expected Result
TC-001	0	Below Minimum	Rejected
TC-002	1	Minimum	Accepted
TC-003	2	Just Above Minimum	Accepted
TC-004	9	Just Below Maximum	Accepted
TC-005	10	Maximum	Accepted
TC-006	11	Above Maximum	Rejected

Question 5: Pick any app you use daily and select one form field. Write both Equivalence Partitioning and Boundary Value Analysis test cases for that field.

Answer

Application: Paytm

Feature: Mobile Recharge

Field: Recharge Amount

Requirement: Recharge amount should be between ₹10 and ₹10,000.

Equivalence Partitioning

Partition	Range	Valid/Invalid
EP1	₹10 – ₹10,000	Valid
EP2	Less than ₹10	Invalid
EP3	Greater than ₹10,000	Invalid
EP4	Alphabetic/Special Characters	Invalid
EP5	Blank Input	Invalid

EP Test Cases

TC ID	Input	Expected Result
TC-001	₹500	Accepted
TC-002	₹5	Rejected
TC-003	₹15,000	Rejected
TC-004	ABC	Validation Error
TC-005	Blank	"Amount is Required"

Boundary Value Analysis (BVA)

TC ID	Input	Boundary Type	Expected Result
TC-006	₹9	Below Minimum	Rejected
TC-007	₹10	Minimum	Accepted
TC-008	₹11	Just Above Minimum	Accepted
TC-009	₹9,999	Just Below Maximum	Accepted
TC-010	₹10,000	Maximum	Accepted
TC-011	₹10,001	Above Maximum	Rejected

Reasoning

Equivalence Partitioning (EP) divides the input into valid and invalid groups so that one test case represents each group, reducing the number of tests while maintaining good coverage.

Boundary Value Analysis (BVA) focuses on the edge values (minimum and maximum limits) because defects are most likely to occur at boundaries.
