

YOLIDAY – TESTING INTERN ASSESSMENT REPORT

SECTION 1: EXPLORATORY TESTING

During exploratory testing of the Yoliday iOS application on a real device, the following bugs and UX issues were identified.

Bug-01: Home page banner image appears blurry

Module / Screen: Home Page

Severity: Low

Type: UI / UX

Steps to Reproduce:

1. Open the Yoliday application
2. Navigate to the Home page

Expected Result:

Home page banner image should be clear and high quality.

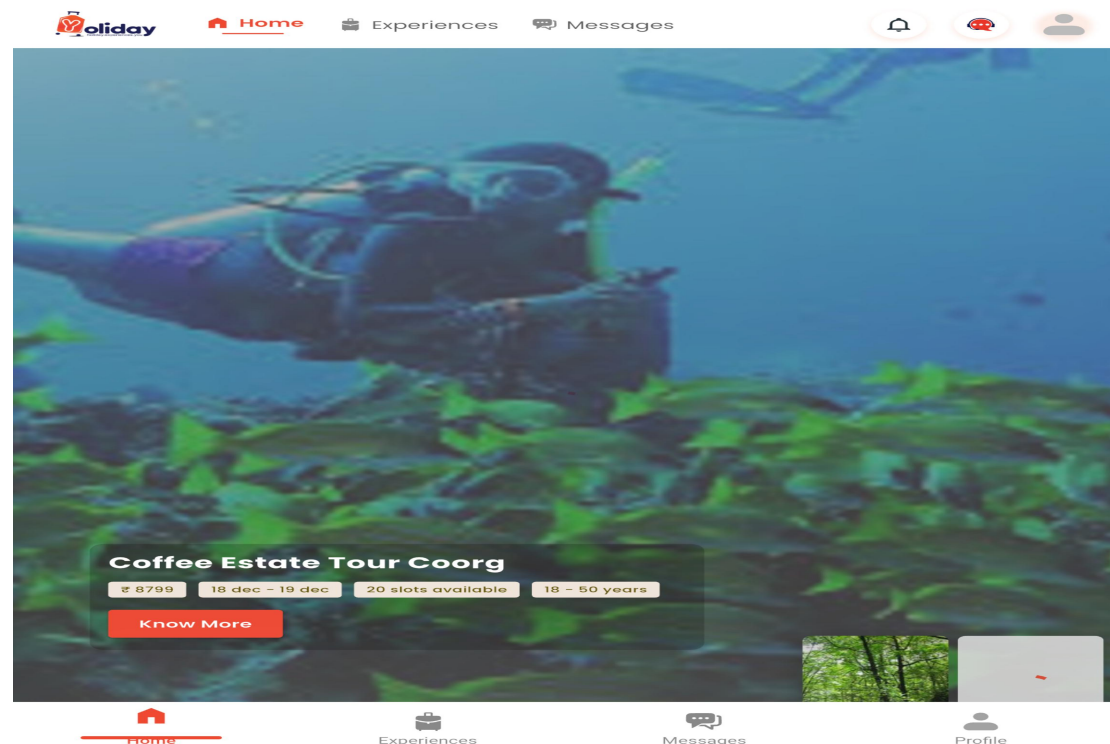

Actual Result:

Banner image appears blurry and low resolution.

Possible Cause:

Low-resolution image asset or improper image compression.

Screenshot:

Bug-02: No explicit Sign-Up option available for new users

Module / Screen: Login / Onboarding

Severity: Medium

Type: UX / Onboarding

Steps to Reproduce:

1. Launch the application
2. Reach the login/onboarding screen

Expected Result:

A clear "Sign Up" or "Register" option should be visible for new users.

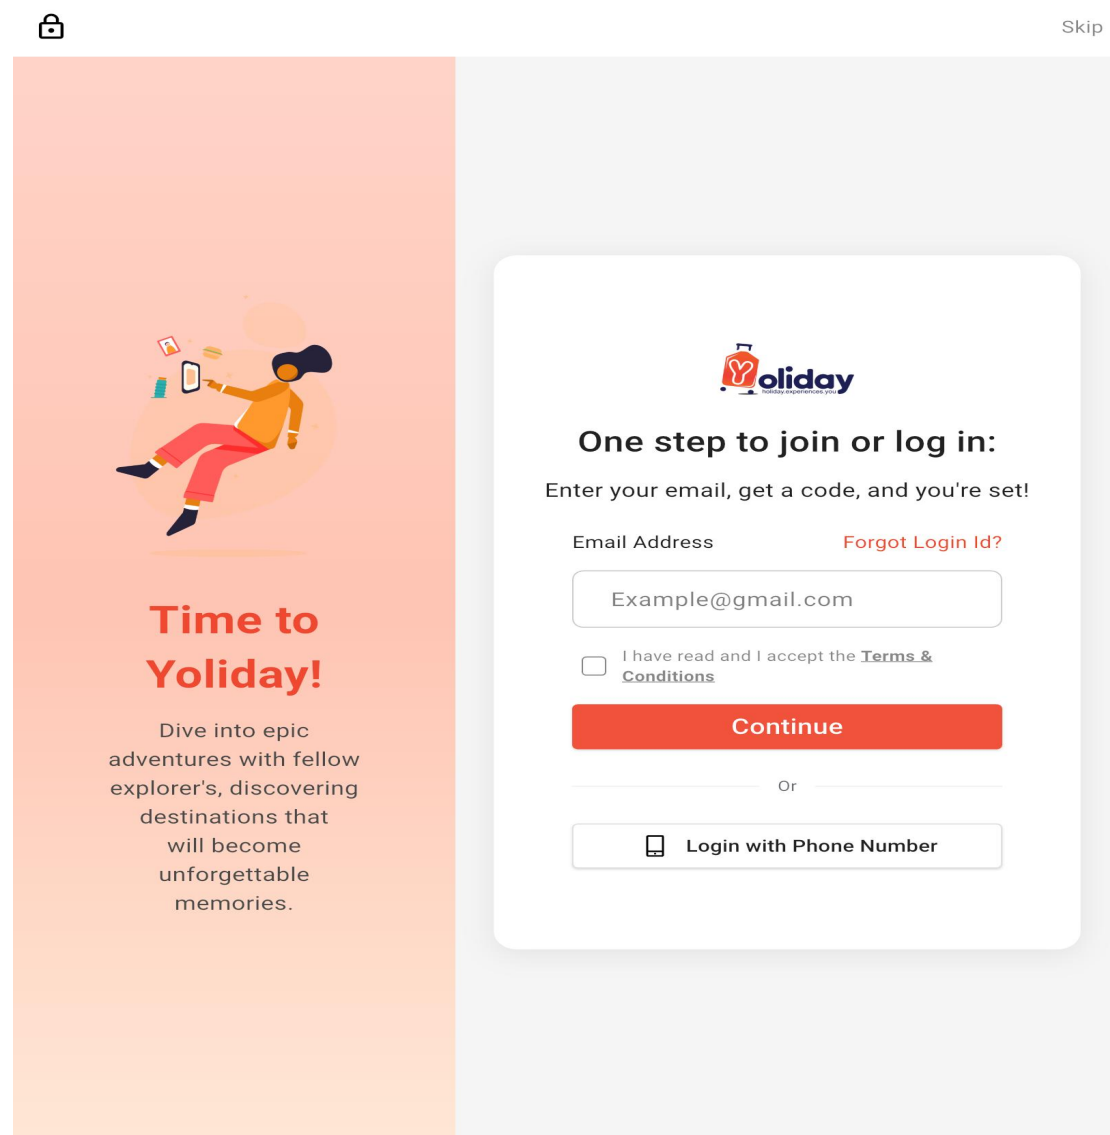

Actual Result:

No explicit sign-up option is shown; account creation is unclear.

Possible Cause:

Merged login and sign-up flow without proper user guidance.

Screenshot:

Bug-03: OTP screen does not clarify login or signup flow

Module / Screen: OTP Verification

Severity: Medium

Type: UX / Flow clarity

Steps to Reproduce:

1. Enter email on login screen
2. Accept Terms & Conditions
3. Tap Continue

Expected Result:

OTP screen should indicate whether the user is logging in or signing up.

Actual Result:

OTP screen appears without any clarification.

Possible Cause:

Missing instructional text in authentication flow.

Bug-04: Same experience appears multiple times under different sections

Module / Screen: Home → Experience Listings

Severity: Medium

Type: UX / Data consistency

Steps to Reproduce:

1. Open Home page
2. Scroll to Hosted Experiences
3. Scroll to Free Experiences

Expected Result:

Each experience should appear only once or be clearly differentiated.

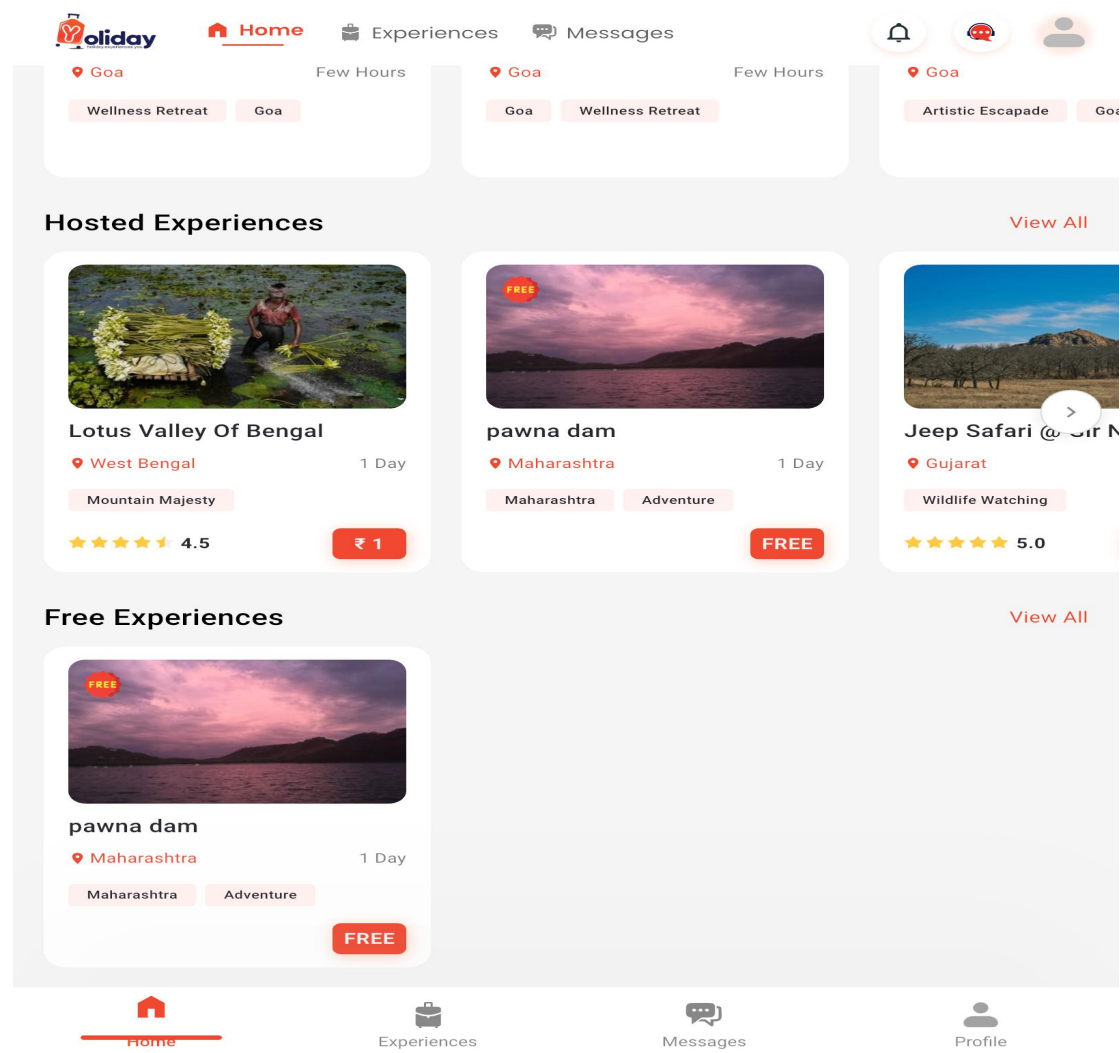

Actual Result:

Same experience appears in multiple sections.

Possible Cause:

Incorrect categorization or missing deduplication logic.

Screenshot:

Bug-05: Some experience images appear blurry

Module / Screen: Experience Listings

Severity: Low

Type: UI / Visual consistency

Steps to Reproduce:

1. Open Home Screen.
2. Open Scuba Diving/Lotus Valley of Bengal Experience

Expected Result:

All experience images should have consistent quality.

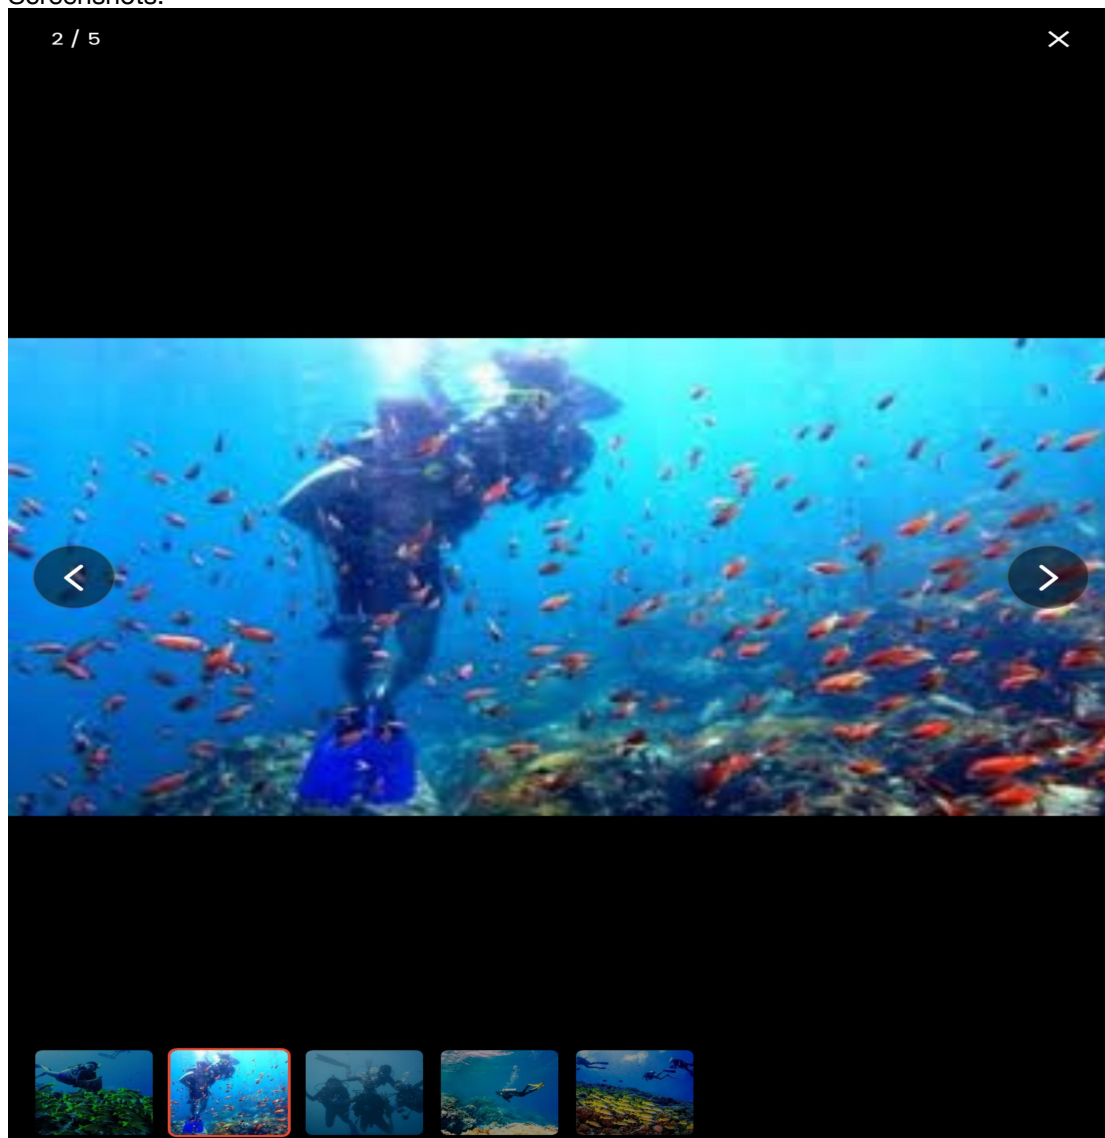

Actual Result:

Some images appear blurry or pixelated.

Possible Cause:

Mixed image resolutions or improper optimization.

Screenshots:

Bug-06 (Extra): Bottom navigation underline behaves inconsistently

Module / Screen: Bottom Navigation

Severity: Low

Type: UI

Steps to Reproduce:

1. Open the Yoliday App.
2. Wait for the Home Screen to load.
3. Observe the underline indicator below the Home Tab in the Bottom navigation
4. Tap on the Experiences tab in the bottom navigation bar.
5. Observe the underline indicator behaviour

Expected Result:

Underline indicator should update correctly when switching tabs.

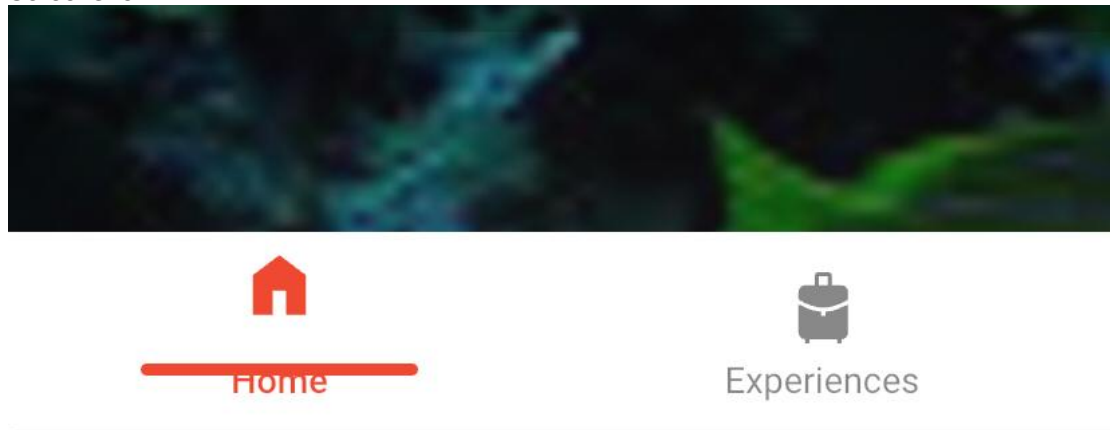

Actual Result:

Underline appears misaligned or delayed.

Possible Cause:

UI state not refreshed correctly.

Screenshot:

Bug-07 (Extra): Top navigation remains on “Messages” after switching to Home

Module / Screen: Top & Bottom Navigation

Severity: Medium

Type: Navigation state

Steps to Reproduce:

1. Launch the Yoliday application
2. Wait for the Home screen to load completely
3. From the top navigation bar, tap on Messages
4. Verify that the Messages screen opens
5. Now tap on Home from the bottom navigation bar

6. Observe the state of the top navigation bar

Expected Result:

Top and bottom navigation should remain synchronized.

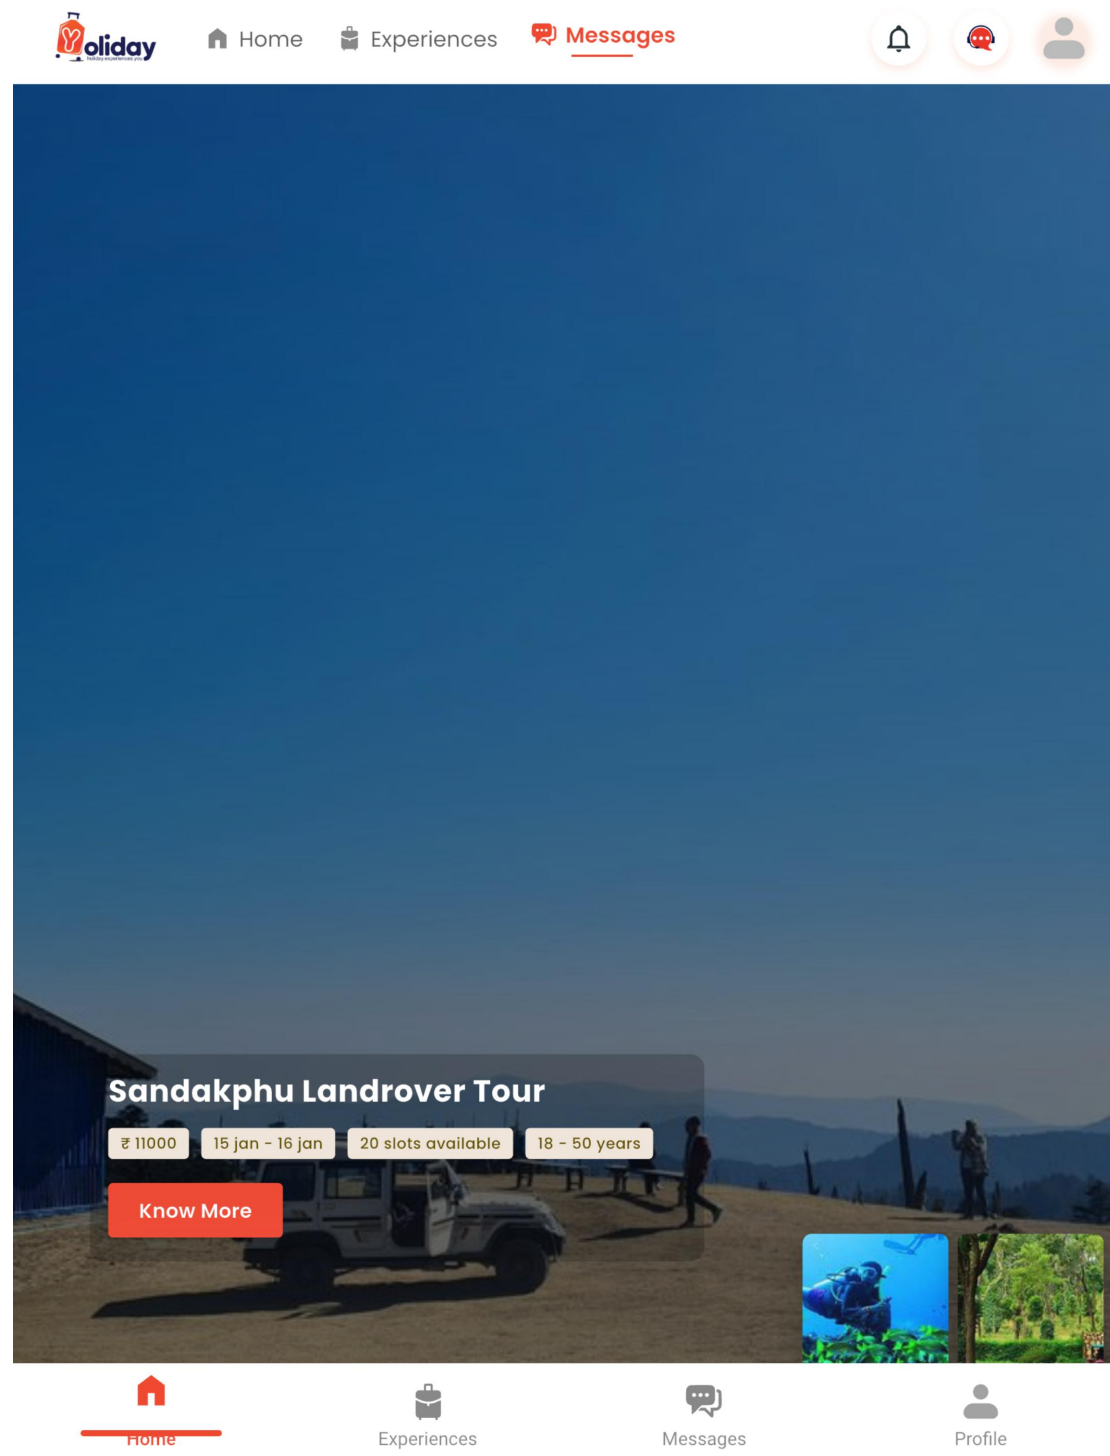

Actual Result:

Top menu still shows “Messages” while Home screen is open.

Possible Cause:

Navigation state not shared across components.

Screenshot:

SECTION 2: TEST CASE DEVELOPMENT

Feature: User can favourite an experience and view it under “My Favourites”

Test Case 1: Add experience to favourites

Test Case ID: TC_FAV_01

Precondition:

User is logged in and experiences are visible.

Test Steps:

1. Open the Yoliday application
2. Navigate to Home or Experiences page
3. Select an experience
4. Tap the favourite (heart) icon

Expected Result:

The experience is added to favourites and the heart icon changes to active state.

Negative / Edge Case:

Try adding favourite without login → user should be prompted to log in.

Test Case 2: View favourited experience in My Favourites

Test Case ID: TC_FAV_02

Precondition:

At least one experience is already added to favourites.

Test Steps:

1. Open the application
2. Click on Profile Picture on the top right side of GHome screen.
3. Navigate to My Favourites Option

Expected Result:

All favourited experiences should be displayed.

Negative / Edge Case:

If no favourites exist, an empty state message should be shown.

Test Case 3: Remove experience from favourites

Test Case ID: TC_FAV_03

Precondition:

User has at least one favourited experience.

Test Steps:

1. Open My Favourites
2. Tap the active heart icon

Expected Result:

Experience is removed from favourites.

Negative / Edge Case:

Rapidly tapping heart icon should not cause app crash or duplication.

Test Case 4: Favourite persistence after app relaunch

Test Case ID: TC_FAV_04

Precondition:

User has favourited an experience.

Test Steps:

1. Close the app completely
2. Relaunch the app
3. Open My Favourites

Expected Result:

Previously favourited experience remains saved.

Negative / Edge Case:

Favourite should persist even after network switch.

Test Case 5: Prevent duplicate favourites

Test Case ID: TC_FAV_05

Precondition:

User is logged in.

Test Steps:

1. Favourite an experience
2. Tap favourite icon again

Expected Result:

Experience should not be duplicated in My Favourites.

Negative / Edge Case:

System should toggle state instead of creating duplicates.

SECTION 3: REQUIREMENT ANALYSIS

Requirement:

User can cancel a booking up to 24 hours before the experience start time.

Edge Case 1: Cancel exactly 24 hours before start time

Manual Testing: Attempt cancellation exactly 24 hours before start.
Expected: Cancellation allowed.

Edge Case 2: Cancel at 23 hours 59 minutes

Manual Testing: Attempt cancellation slightly below limit.
Expected: Cancellation blocked with message.

Edge Case 3: Different time zones

Manual Testing: Change device time zone and attempt cancellation.
Expected: Time calculated based on experience start time.

Edge Case 4: Internet loss during cancellation

Manual Testing: Disable internet during cancellation.
Expected: Error shown and booking remains unchanged.

Edge Case 5: Cancel after experience has started

Manual Testing: Attempt cancellation after start time.
Expected: Cancellation not allowed.

SECTION 4: BUG REPORT (AS PER GIVEN SCENARIO)

Bug Title: “No schedules available” message shown after long loading on Book Now

Module: Booking / Schedule selection

Steps to Reproduce:

1. Open Yoliday app
2. Open a bookable experience
3. Tap “Book Now”
4. Observe loading indicator

Expected Result:

Schedules should load quickly or availability message should appear immediately.

Actual Result:

Loader appears for ~8 seconds and then “No schedules available” message is shown.

Severity: Medium

Possible Cause:

Backend API delay

Empty response not handled efficiently

Poor timeout handling

SECTION 5: DEVICE & ENVIRONMENT DETAILS

Device: iPad (8th Generation)

OS: iPadOS 18.5

Available Storage: ~2 GB

Network: Wi-Fi

Settings: Default system settings, no VPN, no accessibility overrides

SECTION 6: SHORT RESPONSE QUESTIONS

1. A bug is reproducible if it occurs consistently using the same steps.
2. Functional testing validates features; regression testing ensures existing features still work.
3. Platform differences, permissions, and OS behavior can cause Android-iOS issues.
4. Real devices expose performance, network, and hardware issues.
5. "Invite Friends" option was not observed during testing.

FINAL NOTE--

This report is prepared based on real exploratory testing performed on a physical device. All observations are recorded honestly without assumptions.
