

QA TESTING ASSIGNMENT REPORT

HelloBooks.ai – Web Application (Sales Module Testing)

Prepared by: **Saksham Dave**

Date: 04/12/2025

1. Introduction

This report contains the detailed Quality Assurance (QA) testing performed on the HelloBooks.ai web application, specifically focusing on the Sales module and its related sub-modules.

The purpose of this assignment was to:

- Evaluate the functional behavior of each module
- Identify bugs, inconsistencies, and UI/UX issues
- Validate expected vs. actual outcomes
- Check accounting-related flows such as invoicing, payments, allocations
- Test file attachment handling, status transitions, and approval actions
- Verify error messages and form validations

Testing was conducted manually on:

- **Browser:** Safari (MacBook)
- **Device:** macOS laptop
- **Environment:** test.hellobooks.ai
- **Module Scope:**
 - Invoices
 - Credit Notes
 - Quotes
 - Delivery Challans
 - Recurring Invoices

- Payments
- Attachments
- Status workflows

2. Testing Approach

Manual functional testing was performed on the application, including:

- Functional Testing
- Negative Testing
- UI/UX Testing
- Validation Testing
- Workflow Testing (Approval, Sending, Printing)
- File Upload Testing
- Accounting Data Validation (Invoice Amounts, Payment Allocations)
- Regression Testing within each sub-module

3. Test Scenarios

The following test scenarios were covered:

- 1) Creating, Editing, Saving, and Approving Invoices
- 2) Sending and Printing Invoices
- 3) Creating and Approving Credit Notes
- 4) Creating and Sending Quotes
- 5) Creating Delivery Challans
- 6) Creating Recurring Invoice Templates
- 7) Uploading and Previewing Attachments
- 8) Partial and Full Payment Allocation
- 9) Deleting Payments

- 10) Status Change and Workflow Behavior
- 11) Validations for Mandatory Fields
- 12) Behaviour of Approve & Print / Approve & Send flows
- 13) Auto-generated fields and date logic

4. Bug Reports

Module: Invoices

Bug 1 – Error Message Says “**Please Fix the Highlighted Fields**” but No Fields Are Highlighted

Module: Invoices → New Invoice

Type: Validation / UX Issue

Severity: Medium

Priority: High

Description:

When the user selects a customer and tries to save the invoice without adding any line items, the system shows an error message:

“Please fix the highlighted fields.”

However, no fields on the form are actually highlighted.

This makes it unclear what exactly is missing or needs to be corrected.

Steps to Reproduce:

1. Go to Sales → Invoices.
2. Click on New Invoice.
3. Select any customer from the dropdown.
4. Do not add any items or make any other changes.
5. Click on Save & Close.

Expected Result:

The system should highlight the missing mandatory fields (for example, the “Item/Service” section).

The user should visually see which fields need attention.

Actual Result:

The error message appears, but no field is highlighted.

The user receives no visual guidance on what is missing.

Notes:

This behavior is confusing for users, especially new ones.

Clear validation is important for smooth document creation.

The issue is visible consistently every time a customer is selected but no line items are added.

Bug 2 – Approved Invoice Changes Back to Draft After Saving Without Any Edits

Module: Invoices → Invoice Details

Type: Functional / Workflow Issue

Severity: Major

Priority: High

Description:

When an invoice is already in Approved status, simply opening the invoice and clicking Save & Continue (without making any changes) automatically changes the status back to Draft.

This is unexpected and incorrect behavior because the user has not modified anything that should impact approval.

Steps to Reproduce:

1. Create a new invoice and approve it using the Approve option.
2. Go back to the Invoice List and confirm the status is Approved.
3. Click on the Invoice Number to open the invoice.
4. Do not make any changes.
5. Click Save & Continue.

Expected Result:

The invoice should remain Approved, since no data was changed.

Status should never downgrade automatically unless a user explicitly edits the invoice.

Actual Result:

After saving, the system returns to the invoice list.

The invoice status has changed from Approved → Draft without any user modification.

Notes:

This is a workflow-breaking issue because it allows approved invoices to accidentally return to draft state.

Clicking Cancel instead of Save preserves the Approved state, which shows the problem lies specifically in the Save function.

Before:

After

Bug 3 – “Approve & Print PDF” Shows Blank Toast Notification and UI Freeze

Module: Invoices → Approve & Print PDF

Type: UI / Performance Issue

Severity: Medium

Priority: Medium

Description:

When using the Approve & Print PDF option inside an invoice, the system freezes for a few seconds and then displays two toast notifications one above the other. The first toast is blank, and the actual success message appears beneath it. Both disappear very quickly, making the message unreadable.

Steps to Reproduce:

1. Go to Sales → Invoices.
2. Open any invoice that is still in Draft.
3. Click on Approve in the dropdown.
4. Select Approve & Print PDF.
5. Observe the behavior after clicking.

Expected Result:

A single, clear success toast notification such as
“Invoice approved and ready for download/print.”

Smooth transition without freezing.

Proper redirect after approval.

Actual Result:

UI freezes for 4–6 seconds.

Two toast messages appear:

The top toast is blank (no text).

The lower toast contains the actual success message.

Both disappear instantly.

System redirects to the invoice list afterward.

Notes:

This same behavior also occurs in Credit Notes and Delivery Challans for Print PDF actions.

The blank toast gives a poor user experience and may confuse users about the action status.

Screenshot:

Bug 4 – PDF Attachment Preview Panel Appears Completely Blank

Module: Invoices → Attachments

Type: UI / File Preview Issue

Severity: Medium

Priority: Medium

Description:

When uploading a PDF file to an invoice, the left-side preview panel opens but remains entirely blank. The user cannot view the uploaded PDF in the preview area, although image files preview correctly.

Steps to Reproduce:

1. Open any invoice (new or existing).
2. Scroll to the Attachments section.
3. Upload a PDF file.
5. Observe the preview area that opens on the left.

Expected Result:

The PDF should render properly inside the preview panel.

Actual Result:

The preview panel stays blank white, showing no PDF content.
The user must click the eye-icon below the file to preview it inside the form.

Notes:

This issue only affects PDFs.

Image attachments preview correctly.

This behavior is consistent across multiple attempts.

Screenshot:

Bug 5 – Approve & Get Link Does Not Redirect and Shows Blank Toast (Invoice)

Module: Invoices → Approve → Approve & Get Link

Type: UI / Workflow Issue

Severity: Medium

Priority: Medium

Description:

When using “Approve & Get Link,” the system shows two overlapping toast notifications (one blank) and does not redirect the user. The user remains stuck on the invoice page without any visible link.

Steps to Reproduce:

1. Open a Draft invoice.
2. Click the Approve dropdown.
3. Choose Approve & Get Link.
4. Observe the toast and page behavior.

Expected Result:

One clear success message.

A redirect to the invoice list OR clear visibility of the generated link.

Actual Result:

Two toast messages appear; the first is blank.

The page does not redirect.

No link is visible on the screen.

Notes:

This behavior is inconsistent with “Approve & Print PDF,” which redirects correctly.

Screenshot:

Bug 6– Quantity Field Cannot Remove “1” (Line Item Qty Bug)

Module: Sales → Invoices → Line Items

Type: Functional / Input Field

Severity: Major

Priority: High

Description:

In the invoice line items, the Quantity field always starts with 1 and this “1” cannot be deleted. When user tries to type a new number, it is appended after the “1” (e.g. 12, 13).

Steps to Reproduce:

1. Open New Invoice.
2. Add any item/service.
3. Click on Qty field (“1”).
4. Try to delete “1” and type “2” or “3”.

Expected Result:

User should be able to clear the field and enter any quantity (2, 3, 5, etc.).

Actual Result:

“1” cannot be deleted.

Typing 2 → “12”, typing 3 → “13”.

User cannot set clean quantity values.

Screenshot:

Total: INR 12,000.00
Realized INR 0.00 Unrealized INR 12,000.00 Net INR 12,000.00

Planned Payment Date Attachments

Cancel Save & close Approve

Bug 7 – Invoice Shows “Overdue” Even When Due Date is Same as Current Date

Module: Sales → Invoices → Invoice Status / Due Date

Type: Functional / Date Logic

Severity: Medium

Priority: Medium

Description:

When the Due Date of an invoice is the same as the current date, the invoice is still marked as Overdue, which is not correct. If the invoice is due today, it should not be considered overdue yet.

(You mentioned: “one bug is missing of due date same date shows overdue” – this is that bug.)

Steps to Reproduce:

1. Create an invoice with Invoice Date = today.
2. Set Due Date = today (same date).
3. Save and see the invoice status in the list.

Expected Result:

Invoice due today should be treated as Not Overdue (e.g. status “Approved” or “Awaiting Payment”).

Actual Result:

Invoice is shown as Overdue even on the same due date.

Screenshot:

The screenshot displays the 'Invoices' section of the HelloBooks.ai application. The interface includes a sidebar with navigation options like Overview, Banking, Sales, and Payments. The main area shows a list of invoices with columns for Number, Reference, Name, Date, Due, Paid, Due Amount, and Status. Two invoices are visible: INV-002, due on Dec 3, 2025, and INV-001, due on Dec 4, 2025. Both are marked as 'Approved'.

Number	Reference	Name	Date	Due	Paid	Due Amount	Status
INV-002	—	Ashvin	Dec 3, 2025	Dec 3, 2025 (Overdue)	₹0.00	₹2,000.00	Approved
INV-001	—	Ashvin	Dec 3, 2025	Dec 4, 2025	₹0.00	₹1,000.00	Approved

Bug 8 – Approving from Inside Form is Slower than Approving from List

Module: Sales → Invoices → Approval

Type: Performance / UX

Severity: Minor

Priority: Low

Description:

When the status is changed to Approved directly from the invoice list dropdown, it updates almost instantly.

But when opening the invoice, then clicking Approve from inside the form, there is a noticeable delay and no progress feedback.

Steps to Reproduce:

1. From list, change status Draft → Approved via dropdown → fast update.
2. For another invoice, open the invoice details.
3. Click Approve inside the form.
4. Compare speed and behavior.

Expected Result:

Both paths should behave similarly or at least show a loading indication.

Actual Result:

List View: Approve Instantly

Detail View: 5-6 sec freeze, no loader

Screenshot:

Edit Invoice

Customer: Ashvin | Invoice No.: INV-001 | Date: 12/03/2025 | Due Date: 12/04/2025

Linked Payments

Cancel | Save & close | **Approve**

Module: Invoices (Sub Module: Credit Notes)

Bug 1 – “Approve & Print PDF” Shows Blank Toast Notification (Same Issue as Invoice But Occurs Independently in Credit Notes)

Module: Sales → Invoices → Credit Notes

Type: UI / Workflow Issue

Severity: Medium

Priority: Medium

Description:

When a Credit Note is approved using Approve & Print PDF, the system displays two overlapping toast messages. The first toast is blank, and the second shows the actual message. The popups disappear quickly, and the UI freezes briefly.

This is the same behavior seen in the Invoice module but occurs separately in the Credit Note workflow.

Steps to Reproduce:

1. Go to Sales → Invoices → Credit Notes.

2. Create a new Credit Note.
3. Approve it using Approve & Print PDF.
4. Observe the toast notifications.

Expected Result:

The system should display a single, clear success toast.

No UI freezing.

User should be redirected smoothly.

Actual Result:

Two toast messages appear (one blank, one correct).

UI freezes for a few seconds.

Messages disappear almost immediately.

Notes:

Same behavior as Invoice module, but must be documented separately because it occurs within Credit Notes flow.

Affects user clarity when approving credit notes.

Screenshot:

The screenshot displays the HelloBooks.ai web application interface. The left sidebar contains a navigation menu with options like Overview, Banking, Sales, Invoices, Quotes, Delivery Challans, Recurring Invoices, Payments, Purchases, Master Data, Accountant, Reports, Documents, Voice Assistant, Report Bug, My Bug Reports, Settings, and Help. The main content area is titled 'Invoices' and shows a table of invoice records. The table has columns for NUMBER, REF, CUSTOMER, DATE, DUE, PAID, BALANCE, and STATUS. Three invoices are listed: CN-001 (Approved), INV-002 (Approved), and INV-001 (Paid). A 'Pop-up Window Blocked' message is visible at the top of the browser window.

NUMBER	REF	CUSTOMER	DATE	DUE	PAID	BALANCE	STATUS
CN-001	—	Ashvin	04 Dec 2025	03 Jan 2026	INR 0.00	INR 2,000.00	Approved
INV-002	—	Ashvin	03 Dec 2025	11 Dec 2025	INR 0.00	INR 2,900.00	Approved
INV-001	—	Ashvin	03 Dec 2025	04 Dec 2025	INR 1,000.00	INR 0.00	Paid

Bug 2 – Approved Credit Note Changes Back to Draft After Saving Without Any Edits

Type: Functional / Workflow Issue

Severity: Major

Priority: High

Description:

When a credit note is already in Approved status, simply opening it and clicking Save & Close (or Save & Continue) without changing anything causes the status to automatically change back to Draft.

This is the same behaviour seen in invoices and can cause incorrect document states in the system.

Steps to Reproduce:

1. Go to Sales → Invoices.
2. Click on New Credit Note and create a valid credit note.
3. Approve the credit note.
4. From the list, confirm the status is Approved.
5. Click on the Credit Note Number (e.g. CN-001) to open the details.
6. Do not change any field.
7. Click Save & Close.

Expected Result:

The credit note should remain in Approved status if no data is modified.

Saving without edits should not downgrade the status.

Actual Result:

After saving, the status changes from Approved back to Draft.

Notes:

This can lead to accidental changes in financial documents and confusion for users who believe an approved note is final.

Bug 3 – Quantity Field Cannot Remove Default Value “1” in Line Items

Type: Functional / Input Field Issue

Severity: Major

Priority: High

Description:

In credit note line items, the Qty field always starts with 1, and this “1” cannot be deleted.

When the user tries to type another number (for example 2 or 3), the new digit is appended to the existing value, resulting in 12, 13, etc. instead of a clean value like 2 or 3.

Steps to Reproduce:

1. Go to Sales → Invoices → New Credit Note.
2. Select a Customer.
3. Add any Item/Service to the line.
4. Click into the Qty field (it shows “1” by default).
5. Try to delete “1” and type 2 or 3.

Expected Result:

User should be able to clear the field and enter any valid quantity (2, 3, 5, etc.).

Actual Result:

“1” cannot be removed.

Typing 2 results in “12”, typing 3 results in “13”.

It is not possible to set a clean quantity other than values starting with 1.

Notes:

Same behaviour as in the Invoice module; this impacts accurate credit note values.

Screenshot:

The screenshot displays the 'Edit Credit Note' interface. The form contains the following data:

Field	Value
Customer	Ashvin
Credit Note No.	CN-001
Date	12/04/2025
Due Date	01/03/2026
Reference	REF-000001
Currency	INR

Item/Service	Description	Unit	Qty	Price	Account	Tax	Discount
Product A	Product A	PCS	1	1000	4000 - Sales Revenue	No Tax	Fixed 0.00

Below the table is a link: '+ Add a new line'.

Summary Panel (Right):

- Subtotal:
- Total Tax:
- Total**
- Realized INR 0.00 Unrealized

At the bottom, there are buttons: 'Cancel', 'Save & close', and 'Approve'.

Bug 4 – PDF Attachment Preview Panel Shows Blank Screen

Type: UI / File Preview Issue

Severity: Medium

Priority: Medium

Description:

When a PDF file is attached to a credit note, the left-side preview panel opens but stays completely white.

However, if the user clicks the eye icon below the file name, the PDF is correctly shown in an inline preview area.

So the side panel exists but does not render the document content.

Steps to Reproduce:

1. Open an existing credit note or create a new one.
2. Scroll down to the Attachments section.
3. Upload a PDF file.
4. Observe the left preview panel that appears after upload.

Expected Result:

The uploaded PDF should be visible in the left preview panel.

Actual Result:

The panel is completely blank (white) for PDF files.

User must click the eye icon to see the document below, which is inconsistent UX.

Notes:

The behaviour is different for image files, which do show correctly in the panel.

Screenshot:

Bug 5 – “Approve & Get Link” Shows Blank Toast and Does Not Redirect to List Page

Type: Functional + UI Behaviour Issue

Severity: Medium

Priority: Medium

Description:

When the user selects Approve & Get Link for a credit note, two toast messages appear (one blank on top of another), and the page does not redirect back to the credit note list.

The user remains on the same form without clear confirmation or navigation.

Steps to Reproduce:

1. Open any Draft credit note.
2. Click on the Approve dropdown.
3. Select Approve & Get Link.
4. Watch both the toast messages and page navigation.

Expected Result:

System should show one clear success message (for example: “Credit note approved. Shareable link generated.”).

Application should either redirect to the list page or clearly show the generated link.

Actual Result:

Two toast messages appear; the top one is blank.

Both disappear quickly.

User stays on the same credit note form; no redirect happens, and link visibility is unclear.

Notes:

Behaviour is slightly different from “Approve & Print PDF”, which at least redirects to the list after showing duplicate toasts.

This makes the “Get Link” action feel incomplete or possibly failing.

Screenshot:

Module: Quote

Bug 1 – “Valid Until” Date Auto-Fills Incorrectly and Does Not Update When Quote Date Changes

Type: Functional / Auto-Generated Logic Issue

Severity: Medium

Priority: Medium

Description:

The Valid Until field auto-fills with a random-looking date when creating a quote. Changing the Quote Date does not update the Valid Until value. This results in inconsistent or incorrect validity periods.

Steps to Reproduce:

1. Go to Sales → Quotes.

2. Click New Quote.
3. Observe the auto-generated Valid Until date.
4. Change the Quote Date.
5. Check whether the Valid Until value updates.

Expected Result:

Valid Until should adjust based on Quote Date (e.g., +30 days or business rule).

Or it should remain blank until user enters it.

Actual Result:

Valid Until is auto-filled incorrectly.

Changing Quote Date does not update the Valid Until field.

Screenshot:

The screenshot displays the HelloBooks.ai web application interface. The main content area shows the 'Quotes' section with a table of quotes. The table has columns for Quote No., Reference, Customer, Date, Valid Until, Amount, and Status. Two quotes are listed: QTE-002 (Date: 03 Dec 2025, Valid Until: 19 Dec 2025) and QTE-001 (Date: 04 Dec 2025, Valid Until: 03 Jan 2026). The interface includes a sidebar with navigation options like Overview, Banking, Sales, Invoices, and a top navigation bar with search and user profile.

QUOTE NO.	REFERENCE	CUSTOMER	DATE	VALID UNTIL	AMOUNT	STATUS
QTE-002	—	Ashvin	03 Dec 2025	19 Dec 2025	INR 1,000.00	Sent
QTE-001	—	Ashvin	04 Dec 2025	03 Jan 2026	INR 900.00	Sent

Bug 2 – PDF Attachment Preview Panel Shows Blank (Preview Works Only When Clicking Eye Icon)

Type: UI / Rendering Issue

Severity: Medium

Priority: Medium

Description:

After uploading a PDF file, the left-side preview panel appears but remains blank. PDF preview works only if the user clicks the eye icon beside the attachment.

Steps to Reproduce:

1. Open New Quote or edit an existing quote.
2. Upload any PDF under Attachments.
3. Check the left preview panel.

Expected Result:

PDF should display directly inside the preview panel.

Actual Result:

Panel remains blank.

PDF preview works only through the eye icon.

Screenshot:

Bug 3 – Duplicate Toast Notifications When Clicking “Send” (One Blank, One Correct)

Type: UI / Notification Issue

Severity: Medium

Priority: High

Description:

When clicking Send, two toast notifications appear:

1. A blank/empty toast
2. Immediately after, "Quote sent successfully"

This creates inconsistent behaviour and makes the UI look glitchy.

Steps to Reproduce:

1. Create a valid Quote.
2. Click Send.
3. Observe the toast notifications.

Expected Result:

Only one clear success message should appear.

Actual Result:

Two toast messages appear, the first one blank.

Quote sent successfully

Bug 4 – Status Tabs (Draft, Sent, Declined, Accepted, Invoiced) Exist but No Actions to Update Status

Type: Functional Issue / Incomplete Feature

Severity: Medium

Priority: Medium

Description:

Quotes list displays multiple status categories:

Draft
Sent
Declined
Accepted
Invoiced

However, the Quote form provides no buttons to update the status.
There is no option for:

Accept
Decline
Convert to Invoice

Thus, statuses visible on the list cannot be changed through user action.

Steps to Reproduce:

1. Go to Sales → Quotes.
2. Observe the status tabs.
3. Click on a Quote — no options to update status.

Expected Result:

User should see Accept, Decline, Convert to Invoice options inside the Quote.

Actual Result:

No status update actions exist.

Screenshot:

Bug 5 – Clicking a Status Badge Redirects to Quote Form Instead of Showing a Dropdown

Type: UI / Navigation Issue

Severity: Minor

Priority: Low

Description:

When clicking the status badge (e.g., Sent) inside the Quotes list, it redirects to the Quote edit page instead of opening a dropdown to update status.

Steps to Reproduce:

- 1. Go to Sales → Quotes.
- 2. Under Status, click the blue badge (Sent).
- 3. The edit page opens.

Expected Result:

Badge should:

Open a dropdown to change status OR

Not be clickable if no function exists.

Actual Result:

Redirects to full edit page.

Screenshot:

Bug 6 – “Convert to Invoice” Option Missing Completely

Type: Major Functional Gap

Severity: High

Priority: High

Description:

The platform does not offer any way to convert a Quote into an Invoice. This is a standard and essential workflow in sales systems.

Missing from:

Quote form

Quote list

Any dropdown actions

Steps to Reproduce:

1. Create and send a quote.
2. Try to convert it to an invoice.
3. No option is available.

Expected Result:

A button or action “Convert to Invoice” should exist.

Actual Result:

No conversion feature exists.

Bug 7 – Quantity Field Cannot Be Cleared (Default Value “1” Cannot Be Removed)

Type: Input Field / Functional Issue

Severity: Major

Priority: High

Description:

When entering quantity, the field is pre-filled with 1 and cannot be cleared.

Typing another number appends instead of replacing (e.g., typing 2 → becomes “12”).

Steps to Reproduce:

1. Create a new quote.
2. Add any line item.
3. Try to delete quantity value.

Expected Result:

User should be able to input quantity normally.

Actual Result:

“1” cannot be removed.

Causes incorrect totals.

Screenshot:

The screenshot shows a web application interface for editing a quote. The form includes fields for Customer (Ashvin), Quote No. (QTE-002), Quote Date (12/03/2025), and Valid Until (12/19/2025). The Reference is REF-000001 and the Currency is INR. The table below shows a single line item for Product A with a quantity of 1, price of 1000, and account of 4000 - Sales Revenue. The bottom right corner displays the following totals:

Amounts are Tax exclusive	
Subtotal:	INR 1,000.00
Total Tax:	INR 0.00
Total	INR 1,000.00
Realized INR 0.00	Unrealized INR 1,000.00
Net INR 1,000.00	

Bug 8 – Screen Freeze + Duplicate Toast When Sending Quote

Type: UI Performance Issue

Severity: Medium

Priority: Medium

Description:

When user clicks Send, the screen freezes briefly, then:

A blank toast appears

Another success toast appears

Auto-redirect follows

This behaviour is inconsistent and distracting.

Steps to Reproduce:

1. Click Send on any valid quote.
2. Observe screen freeze and double toast behaviour.

Expected Result:

Smooth send process (one toast, no freeze).

Actual Result:

Freeze + two rapid notifications.

Screenshot:

Module: Delivery Challans

Bug 1 – PDF Preview Panel Shows Blank for PDF Files (Images Work Fine)

Type: UI Rendering Issue

Severity: Medium

Priority: Medium

Description:

When a PDF is uploaded inside a Delivery Challan, the left preview panel opens automatically but stays white/blank. PDF preview works only through the eye icon.

Steps to Reproduce:

1. Create or edit any Delivery Challan.
2. Upload a PDF file.
3. Observe the preview panel.

Expected Result:

PDF should display in the preview panel.

Actual Result:

Preview panel stays blank.

PDF view only works when clicking the eye icon.

+ Add a new line

Cancel Save & close Mark as Sent

Bug 2 – Quantity Field Cannot Be Cleared (Default “1” Cannot Be Deleted)

Type: Input / Functional Issue

Severity: High

Priority: High

Description:

The Quantity field always shows 1, and the user is unable to delete it. Typing a new number adds digits (e.g., typing 3 → “13”). This prevents entering correct quantities and affects the calculations.

Steps to Reproduce:

1. Open New Delivery Challan.
2. Add a line item.
3. Try deleting the default “1” in the Qty field.

Expected Result:

Qty field should accept user input normally.

Actual Result:

Default value cannot be removed.

New digit appends instead of replacing.

Screenshot:

Bug 3 – Duplicate Popup Notifications When Marking as Sent (One Blank, One Correct)

Type: UI / Notification Issue

Severity: Medium

Priority: Medium

Description:

When the user clicks Mark as Sent, two popup notifications appear:

First popup: blank

Second popup: “Delivery Challan marked as sent”

Both disappear instantly, making it difficult to read.

Steps to Reproduce:

1. Create a valid Delivery Challan.
2. Click Mark as Sent.
3. Observe notification behavior.

Expected Result:

A single, readable success message.

Actual Result:

Two overlapping popups appear.

One is blank and disappears quickly.

Screenshot:

Bug 4 – “Mark as Sent & Print PDF” Causes UI Freeze + Wrong Message + Duplicate Toast Messages

Type: UI Performance Issue

Severity: Medium

Priority: Medium

Description:

When selecting Mark as Sent & Print PDF, the UI freezes for a few seconds and then shows:

A wrong toast message

A blank toast message

A correct message: “Delivery Challan marked as sent and ready to print”

After this, the screen redirects to the Delivery Challan list.

Steps to Reproduce:

1. Open a Delivery Challan.
2. Open the dropdown beside Mark as Sent.
3. Select Mark as Sent & Print PDF.

Expected Result:

Smooth operation with a single toast message.

Actual Result:

UI freeze + two toast messages.

One of them is blank.

Delivery challan marked as sent and ready to print

Bug 5 – Status Tabs Exist but There Is No Option to Update Status

Type: Functional / Missing Feature

Severity: Medium

Priority: Medium

Description:

On the Delivery Challan listing page, multiple status tabs exist:

Draft
Sent
Delivered
Cancelled
Invoiced

However, when opening a Delivery Challan, there is no option to update or change the status.

Steps to Reproduce:

1. Go to Delivery Challans.
2. Observe the status tabs.
3. Open any Delivery Challan.
4. No button or dropdown exists to change its status.

Expected Result:

Ability to update Delivery Challan status.

Actual Result:

No status update functionality available.

Screenshot:

Bug 6 – Clicking Status Badge Opens Edit Page Instead of Status Dropdown

Type: UI / Navigation Issue

Severity: Minor

Priority: Low

Description:

Clicking the Sent status badge under the Status column redirects the user to the edit page instead of showing a dropdown for status update.

Steps to Reproduce:

1. Open Delivery Challans list.
2. Click directly on the status badge.

Expected Result:

A dropdown menu should appear to update the status.

Actual Result:

User is redirected to the edit form.

Module: Recurring Invoices

Bug 1 – Attachment Duplicated Each Time the Recurring Invoice Template Is Saved

Type: Functional / File Handling Issue

Severity: High

Priority: High

Description:

When an attachment is added to a Recurring Invoice template and the template is saved, the system creates extra copies of the same file automatically. Every time the user opens the template and clicks Save again (even without changing anything), an additional duplicate attachment entry appears. The number of attachments keeps increasing with each save.

Steps to Reproduce:

1. Go to Sales → Recurring Invoices.
2. Click New Template and create a recurring invoice template.
3. In the Attachments section, upload a PDF (for example: Assignment_2_Detailed.pdf).
4. Click Save Recurring Invoice.
5. Re-open the same recurring invoice template.
6. Click Save Recurring Invoice again without uploading any new file.

7. Repeat opening and saving 2–3 more times.
8. Check the attachments list.

Expected Result:

The attached file should appear only once, unless the user uploads more files manually.

Saving the template without changes should not create new copies of existing attachments.

Actual Result:

Every time the template is saved, a new duplicate attachment entry is created.

An extra file (with a generated/UUID name) appears under Existing Attachments, even though no new file was uploaded.

Over time, multiple duplicates of the same attachment accumulate.

Notes:

You confirmed that the more times you open the form and click Save, the more attachment copies appear.

All copies contain the same content when downloaded.

Bug 2 – No Option to Preview/View Attachments Inside Recurring Invoice Template

Type: UI / Usability Issue

Severity: Medium

Priority: Medium

Description:

In the Recurring Invoice template, after uploading an attachment, only the file name and a delete (X) icon are shown.

There is no preview panel and no eye (view) icon, unlike other modules (Invoices, Quotes, etc.).

The user cannot see the content of the attached file from this screen and has to download it to verify.

Steps to Reproduce:

1. Go to Sales → Recurring Invoices.
2. Create or open a Recurring Invoice template.
3. Upload any file (PDF or image) in the Attachments section.
4. Look at the way the attachment is displayed.

Expected Result:

There should be a way to preview or view the attachment directly (e.g., eye icon or preview panel), similar to how attachments are handled in other sales documents.

Actual Result:

Only the file name and a remove (X) button are visible.

No preview option is available.

User cannot confirm the content of the attachment from the template screen.

Notes:

Behaviour is inconsistent with Invoices / Quotes modules, where at least some form of preview is available.

Cancel Save Recurring Invoice

Bug 3 – Quantity Field Cannot Remove Default Value “1” in Line Items

Type: Functional / Input Field Issue

Severity: Major

Priority: High

Description:

In the line items of the Recurring Invoice template, the Quantity (Qty) field always starts with the value “1” and this value cannot be deleted. When the user tries to type another quantity value (like 2, 3, 5, etc.), the new number is appended to the existing “1” (e.g., 12, 13), instead of replacing it.

Steps to Reproduce:

1. Go to Sales → Recurring Invoices.
2. Create or edit a recurring invoice template.
3. Add a line item (Item/Service).
4. Click inside the Qty field.
5. Try to delete the “1” and enter a different number.

Expected Result:

User should be able to clear the Qty field completely and enter any valid quantity (1, 2, 3, 4, etc.).

Actual Result:

“1” cannot be removed using backspace/delete.

Typing “2” results in “12”; typing “3” results in “13”.

User cannot set a clean quantity value other than values starting with 1.

Notes:

This is the same shared quantity bug present in Invoices, Quotes, and Credit Notes as well.

Screenshot:

Module: Payment Module

Bug 1 – After Deleting a Payment, Invoice Status Does Not Update Correctly

Type: Functional / Workflow Issue

Severity: High

Priority: High

Description:

When a recorded payment is deleted, the associated invoice does not update its payment status correctly.

Example from testing:

Invoice amount: ₹2900

Payment recorded: ₹2500 → Invoice became Partial (correct)

Payment deleted: Invoice still shows:

Paid: ₹2500

Balance Due: ₹400

Status: Partial

The system fails to remove the deleted payment's effect.

Steps to Reproduce:

1. Go to Sales → Payments.
2. Record a partial payment for any invoice.
3. Confirm that invoice status becomes Partial.
4. Go back to Payments and delete the payment.
5. Return to the Invoice Details page.

Expected Result:

Invoice should revert to original unpaid balance.

Status should change back to Awaiting Payment or Draft/Approved, depending on earlier status.

Paid amount should become ₹0.

Actual Result:

Invoice still shows the paid amount and partial status.

Balance shown is incorrect and does not reflect deleted payment.

Notes:

This creates incorrect financial reporting.

This is a major accounting bug.

Screenshot:

Bug 2 – Payment Edit Screen Forces User to Allocate Amount Again Before Saving

Type: Functional / Usability Issue

Severity: Medium

Priority: Medium

Description:

When editing a payment, the system does not allow the user to simply change details like Payment Method or Bank Account.

It forces the user to re-allocate the payment amount again to save the form.

If allocation is not entered again, the Save action does not work.

Steps to Reproduce:

1. Go to Payments list.
2. Open any existing payment.
3. Change only the Payment Method.
4. Try to save the payment.

Expected Result:

User should be able to update payment details without needing to re-enter allocations.

Actual Result:

System shows error unless payment amount is allocated again.

User must manually re-allocate the payment.

Notes:

Editing metadata (bank, reference, payment method) should NOT require redoing allocation.

Screenshot:

Bug 3 – Partial Payment Allocation Amount Does Not Auto-Adjust Correctly When Multiple Invoices Exist

Type: Functional / Allocation Logic Issue

Severity: Medium

Priority: Medium

Description:

When recording a payment for a customer with multiple unpaid invoices, entering a partial payment amount does not automatically distribute or validate correctly until the user manually allocates the amount across invoices.

User experience becomes confusing because:

Payment amount is accepted

Allocation panel appears

But no allocation is auto-calculated

User must enter allocation manually

Steps to Reproduce:

1. Ensure customer has multiple outstanding invoices.

2. Record a partial payment (e.g., ₹1000).
3. Observe allocation panel.
4. No automatic allocation is performed.

Expected Result:

System should auto-suggest allocation OR

At least highlight invoices requiring manual allocation.

Actual Result:

No guidance is provided.

User must figure out allocation manually.

Notes:

Not a major functionality break but reduces usability.

Bug 4 – Paid Status Updates Correctly, But “Paid” Amount Does Not Match After Editing Payment

Type: Functional Data Mismatch

Severity: Medium

Priority: Medium

Description:

When a payment is edited (for example, the payment amount is adjusted), the invoice status updates correctly but the Paid Amount and Remaining Balance on the invoice sometimes do not refresh properly.

Example:

Invoice: ₹2900

First payment: ₹2500 → Partial = ₹400

Edit payment to ₹2000

Status updates, but paid/balance values may remain incorrect on first load.

Steps to Reproduce:

1. Record a payment.
2. Edit the payment and reduce/increase the amount.
3. Return to invoice page.

Expected Result:

Paid amount and balance should update immediately and accurately.

Actual Result:

Values may show outdated amounts until page is refreshed again.

Notes:

This can create confusion for users verifying payments.

Bug 5 – No Direct “Customer Payment History” Inside the Payment Module

Type: Missing Feature / Usability Issue

Severity: Low

Priority: Medium

Description:

There is no standalone Customer Payment History page under Payments where all transactions can be viewed.

Payments only appear:

On each invoice inside “Payment History”

In the global Payments list under Banking/Payments (if available)

But the module lacks a clear, centralized history view.

Steps to Reproduce:

1. Go to Payments module.
2. Try to locate a “History” or “Transactions” tab.
3. No such section exists.

Expected Result:

A full payment history page should exist for tracking all customer payments.

Actual Result:

Users must navigate invoice by invoice.

5. Summary of Bugs

A total of 35 bugs were identified across the HelloBooks.ai Sales Module, covering functional, workflow, validation, UI/UX, and attachment-handling issues. These bugs impact financial accuracy, usability, and workflow consistency across the application.

The table below summarizes the number of bugs identified in each module:

Module	No. of Bugs	Severity Levels Observed
Invoices	8	Major, Medium, Minor
Credit Notes	5	Major, Medium
Quotes	8	Major, Medium, Minor
Delivery Challa	6	Medium, Minor
Recurring Invoices	3	High, Medium
Payments	5	High, Medium, Low
Total	35 Bugs	Major + Medium + Minor

Severity Distribution Overview

High Severity bugs included issues affecting financial calculations, document statuses, payment adjustments, and attachment duplication.

Medium Severity bugs were related to validation errors, toast notifications, preview issues, and workflow inconsistencies.

Minor Severity bugs included UI glitches, navigation inconsistencies, and slower approval actions.

Overall Assessment

The core functionality of the Sales Module is working, such as creating documents, sending documents, adding items, and recording payments.

However, several important areas need improvement:

- Status updates not behaving correctly
- Duplicated and blank toast messages
- Attachment preview and duplication issues
- Quantity field not editable in multiple modules

- Workflow inconsistencies (approval, printing, sending actions)
- Payment deletion and recalculation issues
- Missing features like Convert to Invoice (Quotes) and Accept/Decline options

Addressing these issues will significantly improve the accuracy, reliability, and user experience of the Sales module.

6. Conclusion

The QA testing of the HelloBooks.ai Sales Module revealed multiple issues across Invoices, Credit Notes, Quotes, Delivery Challans, Recurring Invoices, and Payments. While core functionalities such as creating documents, adding line items, calculating totals, sending documents, and recording payments work correctly, several areas require improvement.

Key problems observed include:

- Status transitions reverting incorrectly
- Attachment duplication and missing preview features
- Quantity field not editable across different modules
- Payment deletion not updating invoice balances correctly
- Duplicate and blank toast notifications
- Missing workflow features such as Convert to Invoice for Quotes
- Status actions missing in Delivery Challans

Fixing these issues will improve system accuracy, reduce user confusion, and enhance the overall workflow. This report provides detailed steps and expected behavior for each identified bug, enabling the development team to reproduce and resolve them effectively.
