

Assignment-2 Session18

Question 1: Write an End-to-End (E2E) test scenario for booking a movie ticket on BookMyShow, starting from searching for a movie to completing the payment and receiving a booking confirmation.

Answer

Application

BookMyShow

Test Scenario

Verify that a user can successfully book a movie ticket from start to finish.

Test Steps

1. Launch the BookMyShow application.
2. Login with valid credentials.
3. Search for the desired movie.
4. Select the city.
5. Choose a theatre.
6. Select the preferred show time.
7. Choose available seats.
8. Click **Proceed to Payment**.
9. Select a payment method.
10. Complete the payment successfully.
11. Verify the booking confirmation page.
12. Verify the booking appears in **My Bookings**.
13. Verify confirmation SMS/Email is received.

Expected Result

The movie ticket should be booked successfully, payment should be completed, booking details should appear in **My Bookings**, and the user should receive a confirmation message.

Question 2: Create a detailed System Integration Test scenario for placing a food order on Zomato, covering steps from selecting a restaurant and adding items to the cart, to payment and order tracking.

Answer

Application

Zomato

Modules Involved

- Login Module
- Restaurant Search Module
- Menu Module
- Cart Module
- Coupon Module
- Payment Gateway
- Order Management System
- Order Tracking Module
- Notification Service

Test Scenario

- Login with valid credentials.
- Search for a restaurant.
- Open the restaurant menu.
- Add food items to the cart.
- Apply a valid coupon.
- Verify the discount calculation.
- Proceed to checkout.
- Select a delivery address.
- Complete payment successfully.
- Verify the order is placed.
- Verify the order appears in My Orders.
- Track the order until delivery.
- Verify push notification and SMS confirmation are received.

Expected Result

All integrated modules should communicate correctly, and the order should be placed, tracked, and delivered successfully without any integration failures.

Question 3: Write an End-to-End workflow test for a Flipkart-style shopping journey. Include both a positive and a negative scenario.

Answer

Positive Scenario

Objective: Verify successful product purchase.

Test Steps

- 1) Login using valid credentials.
- 2) Search for a laptop.
- 3) Open the product page.
- 4) Add the product to the cart.
- 5) Apply a valid coupon code.
- 6) Verify the discount is applied.
- 7) Select the delivery address.
- 8) Proceed to payment.

- 9) Complete payment successfully.
- 10) Verify the order confirmation page.
- 11) Verify the order appears in **My Orders**.

Expected Result

The order should be placed successfully with the correct discount applied.

Negative Scenario

Objective: Verify system behavior when an invalid coupon is applied.

Test Steps

1. Login successfully.
2. Add a product to the cart.
3. Apply an invalid coupon code.
4. Verify the error message.
5. Continue checkout without the coupon.
6. Complete payment.

Expected Result

The application should display an **"Invalid Coupon"** message and allow the user to continue the purchase without applying the discount.

Question 4: List all the System Integrations involved in a Paytm mobile recharge flow and write one test case for each integration point.

Answer

Application

Paytm

Mobile Recharge Flow Integrations

Integration Point	Test Case	Expected Result
Login Service ↔ Authentication Server	Login using valid mobile number and OTP.	User should log in successfully.
Recharge Module ↔ Mobile Operator API	Select a recharge plan.	Available recharge plans should be displayed correctly.
Recharge Module ↔ Payment Gateway	Complete payment using UPI/Card/Wallet.	Payment should be processed successfully.
Payment Gateway ↔ Bank Server	Verify payment authorization.	Transaction should be approved successfully.
Recharge Module ↔	Verify recharge request is	Recharge should be

Integration Point	Test Case	Expected Result
Telecom Operator	sent after successful payment.	completed successfully.
Notification Service ↔ SMS Gateway	Verify confirmation SMS is sent after recharge.	Recharge confirmation SMS should be received.
Notification Service ↔ Email/Push Notification Service	Verify push notification is received.	Recharge success notification should be displayed.
Recharge Module ↔ Transaction History	Verify recharge appears in transaction history.	Recharge record should be visible with correct details.

Difference Between End-to-End Testing and System Integration Testing

End-to-End (E2E) Testing	System Integration Testing
Tests the complete business workflow from start to finish.	Tests communication between integrated modules.
Covers the entire application.	Focuses on interactions between specific systems or modules.
Validates the user journey.	Validates data exchange and interface behavior.
Example: Complete Flipkart purchase from login to delivery confirmation.	Example: Verify Cart, Payment Gateway, and Order modules exchange data correctly.
