

Assignment-2 Session 25

Question 1: Prepare a one-page Test Summary Report for a recent feature update in a food delivery app like Zomato.

Answer

Test Summary Report

Project Name: Zomato Food Delivery App

Feature Tested: Live Order Tracking

Build Version: V2.5.0

Testing Period: 23 June 2026 – 27 June 2026

Prepared By: QA Team

1. Test Objective

To verify that the **Live Order Tracking** feature functions correctly and allows users to track their food orders in real time with accurate status updates and notifications.

2. Test Coverage

Modules Tested

- Login
- Restaurant Selection
- Order Placement
- Live Order Tracking
- Push Notifications
- Order History

Total Test Cases Planned: 80

Executed: 80

Passed: 76

Failed: 4

Blocked: 0

3. Major Defects Found

Defect ID	Description	Severity	Status
BUG-101	Live location not refreshing automatically	High	Fixed
BUG-102	ETA displayed incorrectly	Medium	Fixed
BUG-103	Push notification delayed	Medium	Open
BUG-104	Order status not updating immediately	High	Fixed

4. Overall Test Status

- Functional Testing: Completed
- Regression Testing: Completed
- Re-testing: Completed
- Smoke Testing: Passed

Release Recommendation

The application is **recommended for release**. Only one medium-severity issue remains open, which does not impact the core order placement functionality.

Question 2: Create a sample Daily QA Report for a 5-day sprint in a BookMyShow-style application.

Answer

Daily QA Report

Day	Test Cases Executed	Passed	Failed	Blocked
Day 1	20	18	2	0
Day 2	25	23	2	0
Day 3	30	27	2	1
Day 4	22	21	1	0
Day 5	18	18	0	0

Sprint Summary

Item	Count
Total Executed	115
Total Passed	107
Total Failed	7
Total Blocked	1

Question 3: List and define five common QA Metrics and explain how each would be useful for testing a digital payments app like Paytm.

Answer

QA Metric	Definition	Use in Paytm Testing
Defect Density	Number of defects found per module or unit of software.	Helps identify payment modules with the highest number of defects.
Test Case Execution Rate	Percentage of planned test cases that were executed.	Measures testing progress before a release.
Defect Leakage	Defects found by users after release that were missed during testing.	Indicates how effective pre-release testing was.
Test Coverage	Percentage of requirements or features covered by test cases.	Ensures login, recharge, UPI, wallet, and payment features are thoroughly tested.
Defect Reopen Rate	Percentage of previously fixed defects that are reopened.	Measures the quality of bug fixes and whether issues are resolved correctly.

Question 4: Calculate the Test Case Execution Rate and Defect Reopen Rate.

Given Data

- ✧ Planned Test Cases = 120
- ✧ Executed Test Cases = 110
- ✧ Passed = 95
- ✧ Failed = 15
- ✧ Reopened Defects = 5

Assume **Total Defects Found = 20**

(A) Test Case Execution Rate

Formula

Execution Rate = (Executed ÷ Planned) × 100

Calculation

$$= (110 \div 120) \times 100$$

$$= 91.67\%$$

Result

Test Case Execution Rate = 91.67%

(B) Defect Reopen Rate

Formula

$$\text{Defect Reopen Rate} = (\text{Reopened} \div \text{Total Defects Found}) \times 100$$

Calculation

$$= (5 \div 20) \times 100$$

$$= 25\%$$

Result

$$\text{Defect Reopen Rate} = 25$$

Interpretation

Test Case Execution Rate (91.67%)

- ✧ A high execution rate indicates that most of the planned testing activities were completed.
- ✧ Around **8.33%** of planned test cases were not executed and should be completed before the final release.

Defect Reopen Rate (25%)

- ✧ A **25%** reopen rate means that one out of every four reported defects required additional fixing.
- ✧ This suggests that some fixes were incomplete or introduced new issues, indicating the need for stronger code reviews and more thorough re-testing before closing defects.

Common QA Reports

Report	Purpose
Test Summary Report	Provides the overall testing outcome at the end of a testing cycle.
Daily QA Report	Tracks daily testing progress and execution status.
Defect Report	Records detailed information about identified defects.
Test Execution Report	Shows the execution status of all test cases.
Metrics Report	Measures testing quality and project progress using KPIs.
