

Assignment-2 Session6

Question 1: Write a unit test scenario for the "Add to Cart" function in a shopping app like Flipkart, focusing on what should be tested at the smallest code level.

Answer

Unit Test Scenario – Add to Cart Function

Module: Add to Cart

Objective: Verify that the Add to Cart function works correctly at the code level.

Test Scenario:

A user clicks the "Add to Cart" button for a product.

Testing Activities:

- Verify that the selected product is added to the cart.
- Verify that the cart count increases by one.
- Verify that the correct product ID is stored.
- Verify that product quantity is set to 1 by default.
- Verify that duplicate products update the quantity instead of creating a new entry (if required).

Expected Result:

The selected product should be successfully added to the cart, and the cart count should increase correctly.

Question 2: Describe an integration testing scenario for a payment flow in a food delivery app like Zomato, where you need to test the interaction between the order placement module and the payment gateway.

Answer

Integration Testing Scenario – Payment Flow

Modules Involved:

- Cart Module
- Order Placement Module
- Payment Gateway
- Order Confirmation Module

Scenario:

- 1) User adds food items to the cart.
- 2) User clicks **Place Order**.
- 3) Order details are sent to the Payment Gateway.
- 4) User completes payment successfully.

- Payment Gateway returns a success response.
- Order status changes to **Confirmed**.
- Confirmation message is displayed to the user.

Expected Result:

- ✧ Order details should be transferred correctly.
- ✧ Payment should be processed successfully.
- ✧ Order confirmation should be generated only after successful payment.
- ✧ All connected modules should exchange data correctly.

Question 3: Write a system testing scenario for the ticket booking process in a BookMyShow-style app, covering the complete end-to-end flow.

Answer

System Testing Scenario – Movie Ticket Booking

Objective:

Verify the complete movie ticket booking process.

Scenario:

1. Launch the application.
2. Login using valid credentials.
3. Search for a movie.
4. Select city and theatre.
5. Choose show timing.
6. Select available seats.
7. Proceed to payment.
8. Complete payment successfully.
9. Receive booking confirmation.
10. Verify booking appears in **My Bookings**.

Expected Result:

The complete booking process should work successfully from searching the movie to receiving the booking confirmation without any errors.

Question 4: Create an acceptance testing (UAT/SAT) scenario for a new playlist feature in a music app like Spotify, focusing on how a real user would verify that the feature meets their needs.

Answer

User Acceptance Testing (UAT) Scenario – Playlist Feature

Objective:

Verify that the Playlist feature satisfies user requirements.

Scenario:

- 1) User logs into the application.
- 2) User creates a new playlist.
- 3) User enters a playlist name.
- 4) User adds multiple songs.
- 5) User removes a song.
- 6) User edits the playlist name.
- 7) User saves the playlist.
- 8) User logs out and logs in again.
- 9) Verify that the playlist is still available.

Expected Result:

The playlist should be created, edited, saved, and displayed correctly after the user logs in again. The feature should meet user expectations without any functional issues.

Question 5: Write a scenario for Alpha Testing or Beta Testing for a new Group Chat feature in a messaging app like WhatsApp, specifying who performs the testing and what feedback is expected.

Answer**Alpha Testing Scenario – Group Chat Feature**

Testing Type: Alpha Testing

Who Performs the Test?

Internal QA team, developers, and company employees.

Scenario:

1. Create a new group.
2. Add multiple participants.
3. Send text messages.
4. Send images and documents.
5. Remove a participant.
6. Change the group name.
7. Delete the group.

Expected Feedback:

- Functional defects
- Application crashes
- UI alignment issues
- Performance problems
- Message delivery failures
- Security issues
