

Assignment-2 Session15

Question 1: Pick any live webpage you use daily (for example, Zomato, Flipkart, or BookMyShow home page) and conduct 15 minutes of exploratory testing. Note at least 5 issues, unexpected behaviors, or UI glitches you discover during your session.

Answer

Note: This question requires **actual testing on a live website**. The observations below are **sample findings**. Replace them with your own findings after performing exploratory testing.

Application: Flipkart Home Page

Issue ID	Observation	Severity	Suggestion
ET-001	Promotional banner takes longer than expected to load on a slow network.	Medium	Optimize image loading and enable lazy loading.
ET-002	Product cards briefly shift position while images are loading (layout shift).	Low	Reserve image space to prevent layout movement.
ET-003	Search suggestions take noticeable time to appear during rapid typing.	Medium	Improve autocomplete response time.
ET-004	Some promotional banners contain very long text that wraps awkwardly on smaller screens.	Low	Improve responsive UI for banner text.
ET-005	The page requires extensive scrolling because many promotional sections appear before product categories.	Low	Improve homepage content organization for better usability.

Question 2: Use Error Guessing on the Flipkart Login page. Try at least 3 unusual input combinations and record what happens.

Answer

Test Case	Input	Expected Result
EG-001	Leave Email/Mobile field blank and click Continue	Validation message should appear asking the user to enter a valid email or mobile number.
EG-002	Enter a very long email address (more than 100 characters)	System should reject invalid input or display an appropriate validation message without crashing.
EG-003	Enter a valid email/mobile and use a password containing many special characters (e.g., @#%\$!^&*())	Login should fail gracefully if credentials are incorrect, and the application should remain stable.

Purpose of Error Guessing

Error Guessing uses tester experience to identify scenarios where users may enter unexpected or invalid data.

Question 3: Create a table listing at least 5 exploratory test scenarios for the Zomato Restaurant Search feature.

Answer

Scenario ID	Exploratory Test Activity	Expected Bug or Issue
ETS-001	Search using a valid restaurant name.	Incorrect search results or missing restaurants.
ETS-002	Search using special characters (e.g., @#\$%).	Search crashes or unexpected results.
ETS-003	Search with a very long restaurant name.	Input truncation or UI layout issues.
ETS-004	Search using an empty text box.	Missing validation or confusing user experience.
ETS-005	Rapidly change search keywords while results are loading.	Delayed updates, inconsistent search results, or UI flickering.

Question 4: Perform exploratory testing on the Paytm recharge flow (up to the payment screen, do not actually pay) and write a short report describing your testing approach, any bugs or usability issues found, and suggestions for improvement.

Answer

Exploratory Testing Report

Application: Paytm

Module: Mobile Recharge

Testing Approach

The recharge flow was explored without following predefined test cases. Different mobile numbers, recharge amounts, and navigation paths were checked to identify usability, validation, and functional issues before reaching the payment screen.

Sample Observations

- Validation messages should clearly explain why an invalid mobile number is rejected.
- The recharge amount field should prevent alphabetic characters from being entered.

- Users may become confused if multiple payment options are displayed without highlighting the recommended option.
- Error messages should be more descriptive when network connectivity is poor.

Suggestions for Improvement

- Provide clearer validation messages.
- Highlight the recommended payment method.
- Improve loading indicators during recharge plan retrieval.
- Display more user-friendly error messages when the internet connection is unstable.
