

Assignment-2 Session9

Question 1: Pick any one feature from a popular app you use (for example, "Add to Cart" in Flipkart or "Send Message" in WhatsApp) and write 5 high-level test scenarios for it.

Answer

Application: Flipkart

Feature: Add to Cart

Test Scenarios

TS-001: Verify that a user can successfully add a product to the shopping cart.

TS-002: Verify that the cart count increases after adding a product.

TS-003: Verify that adding the same product again updates the quantity instead of creating duplicate entries.

TS-004: Verify that a user can remove a product from the shopping cart.

TS-005: Verify that the total cart price is updated correctly after adding or removing products.

Question 2: For the "Search Restaurant" feature in a Zomato-like app, write 10 specific test scenarios covering both functional and non-functional aspects.

Answer

Application: Zomato

Feature: Search Restaurant

Scenario ID	Test Scenario	Type
TS-001	Verify search using a valid restaurant name.	Functional
TS-002	Verify search using a partial restaurant name.	Functional
TS-003	Verify search using an invalid restaurant name.	Functional
TS-004	Verify search with blank input.	Functional
TS-005	Verify search results using cuisine filters (Pizza, Chinese, etc.).	Functional
TS-006	Verify search results using location filters.	Functional
TS-007	Verify "No Results Found" message when no restaurant matches.	Functional

Scenario ID	Test Scenario	Type
TS-008	Verify search response time is within acceptable limits (e.g., less than 3 seconds).	Non-Functional (Performance)
TS-009	Verify search UI is responsive on mobile, tablet, and desktop devices.	Non-Functional (UI/Compatibility)
TS-010	Verify search continues to work correctly during high user traffic.	Non-Functional (Performance/Load)

Question 3: Choose one scenario from your Zomato "Search Restaurant" scenarios and convert it into 5 detailed test cases.

Answer

Selected Scenario: Verify search using a valid restaurant name.

Test Case ID	Steps	Test Data	Expected Result	Actual Result
TC-001	Open app → Enter "Domino's" → Click Search	Domino's	Domino's restaurants are displayed.	_____
TC-002	Open app → Enter "McDonald's" → Click Search	McDonald's	McDonald's restaurants are displayed.	_____
TC-003	Open app → Enter "Pizza Hut" → Click Search	Pizza Hut	Pizza Hut restaurants are displayed.	_____
TC-004	Open app → Enter "Subway" → Click Search	Subway	Subway restaurants are displayed.	_____
TC-005	Open app → Enter "Burger King" → Click Search	Burger King	Burger King restaurants are displayed.	_____

Question 4: Create a simple test case template for the "Add to Playlist" feature in a Spotify-like app.

Answer

Test Case ID	Scenario	Steps	Test Data	Expected Result
TC-001	Add a single song to a playlist	Open playlist → Select song → Click Add to Playlist	Song A	Song is successfully added to the selected playlist.
TC-	Add multiple	Select multiple	Song	All selected songs are added

Test Case ID	Scenario	Steps	Test Data	Expected Result
002	songs to a playlist	songs → Click Add to Playlist	A, Song B	successfully.
TC-003	Add the same song again	Select existing song → Add to Playlist	Song A	Appropriate message is displayed or duplicate handling works as per requirements.
TC-004	Add song without selecting a playlist	Click Add to Playlist without choosing a playlist	Song C	Validation message prompts the user to select a playlist.

Question 5: Write a basic test script (in plain English) for the "Login with OTP" feature in a Paytm-style app. Include both valid and invalid OTP scenarios.

Answer

Test Script – Login with OTP

Feature: Login with OTP

Valid OTP Scenario

1. Launch the application.
2. Verify that the Login screen is displayed.
3. Enter a valid registered mobile number.
4. Click the **Send OTP** button.
5. Verify that an OTP is received on the registered mobile number.
6. Enter the correct OTP.
7. Click the **Verify/Login** button.
8. Verify that the user is successfully logged in and redirected to the Home screen.

Expected Result:

The user should successfully log in after entering the correct OTP.

Invalid OTP Scenario

- 1) Launch the application.
- 2) Enter a valid registered mobile number.
- 3) Click the **Send OTP** button.
- 4) Enter an incorrect OTP.
- 5) Click the **Verify/Login** button.
- 6) Verify that the application displays an "**Invalid OTP**" error message.
- 7) Click **Resend OTP**.
- 8) Enter the newly received valid OTP.
- 9) Click the **Verify/Login** button.

10) Verify that the user is successfully logged in.

Expected Result:

The application should reject the incorrect OTP, display an appropriate error message, allow OTP resend, and successfully log in only after a valid OTP is entered.
