

Assignment-2 Session7

Question 1: Pick any one app you use daily (like Zomato, Instagram, or Paytm) and write a detailed Test Plan for its Login feature.

Answer

Test Plan

Test Plan ID

TP_LOGIN_001

Application

Zomato

Feature

Login Module

Objective

To verify that the Login feature works correctly for valid and invalid users, provides proper validation messages, and allows secure authentication using email, mobile number, OTP, and password.

Scope

In Scope

- Login using Email
- Login using Mobile Number
- OTP Login
- Password Login
- Forgot Password
- Remember Me
- Logout after Login

Out of Scope

User Registration

Payment Module

Restaurant Search

Order Placement

Test Items

- Login Screen
- Email Field
- Mobile Number Field
- Password Field
- OTP Verification
- Login Button
- Forgot Password
- Remember Me Option

Features to be Tested

- Successful Login
- Invalid Login
- Blank Field Validation
- Incorrect Password Validation
- OTP Verification
- Session Management
- Error Messages
- Password Masking

Features Not to be Tested

- Payment Processing
- Food Ordering
- Cart Functionality
- Restaurant Listing

Test Deliverables

- Test Plan
- Test Cases
- Test Data
- Bug Report
- Test Execution Report
- Test Summary Report

Schedule

Activity	Duration
Requirement Analysis	1 Day
Test Planning	1 Day
Test Case Design	2 Days
Environment Setup	1 Day
Test Execution	3 Days
Regression Testing	1 Day

Activity	Duration
Test Closure	1 Day

Responsible Roles

Role	Responsibility
Test Leader	Prepare Test Plan, Review Testing, Release Approval
Tester	Design Test Cases, Execute Tests, Report Bugs
Developer	Fix Defects
Product Owner	Approve Requirements

Question 2: Create a mini Test Strategy document for the Search functionality in a BookMyShow-like application.

Answer

Mini Test Strategy

Feature

Movie Search

Testing Approach

Unit Testing

Developers will test individual search functions, such as searching by movie name or city.

Tool: JUnit

Integration Testing

Verify communication between the Search Module, Database, and Movie Listing Module.

Tool: Postman

System Testing

Test complete search functionality from entering a keyword to displaying movie results.

Tool: Selenium (Automation) / Manual Testing

Functional Testing

Verify:

- ✓ Search by Movie Name
- ✓ Search by City
- ✓ Search by Language
- ✓ Search Suggestions

Tool: Selenium / Manual Testing

Non-Functional Testing

Performance Testing

Verify search results load quickly.

Tool: Apache JMeter

Compatibility Testing

Verify search works on Chrome, Firefox, Edge, Android, and iPhone.

Tool: BrowserStack

Security Testing

Verify search input is protected from SQL Injection and malicious inputs.

Tool: OWASP ZAP

Question 3: List and explain three key differences between a Test Plan and a Test Strategy using examples.

Answer

Test Plan	Test Strategy
Project-specific document.	Organization-level document.
Describes what will be tested in a project.	Defines the overall testing approach.
Prepared by the Test Leader or Test Manager.	Usually prepared by the QA Manager or Test Architect.

Example

Test Plan

For the Zomato Login module, the Test Plan defines scope, schedule, resources, and test cases.

Test Strategy

The organization decides that every project will perform Functional Testing, Regression Testing, Security Testing, and Performance Testing using Selenium and JMeter.

Question 4: Identify at least two Risks, two Assumptions, and two Dependencies that could affect testing the Payment feature in a shopping application.

Answer

Risks

1. Payment Gateway Server Downtime.
2. High transaction traffic causing payment failures.

Assumptions

- 1) Test payment accounts are available.
- 2) Stable internet connection is available during testing.

Dependencies

1. Payment Gateway API should be available.
2. Test environment and database should be configured before testing begins.

Question 5: Your team is planning to test the "Add to Cart" feature in an online grocery application. Write a short paragraph describing how you would update the Test Plan if a new dependency (like a third-party coupon system) is introduced during the project.

Answer

If a third-party coupon system is introduced, the Test Plan should be updated to include coupon validation, discount calculation, and integration testing between the shopping cart and the coupon service. Additional test cases should be created for valid, invalid, expired, and partially applicable coupons. The testing schedule may need to be extended to allow time for integration testing and regression testing. New deliverables such as coupon-specific test cases and integration test reports should also be included in the Test Plan.
